CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

Cat. No. CM17083 50 ohm linear rheostat **List Price $2.20**

Cat. No. CM17084 35 ohm tapered rheostat **List Price $2.20**

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

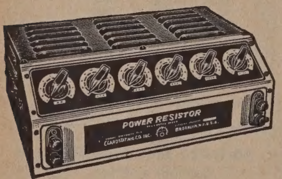
POWER RESISTOR DECADE BOX



The Resistance Decade Box Model No. 2400 allows changing resistance at a flip of the switch in a working circuit. Any value obtainable from 1 ohm to 999,999 in steps of one ohm and at a maximum power rating of 225 watts using a maximum of 1000 volts D.C. or 660 volts A.C.

Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

Clarostat "Greenohm" resistors are used throughout. These are inorganic-cement-coated wire-wound power resistors. The resistors are mounted on rigid metal supports. A baffle plate separating the resistor bank from the switch assembly protects the latter against heat.

The heavy-gauge metal case is finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. 13 in. long; 8½ in. deep; 5¾ in. high. Weight, 11 lbs.

SUGGESTED USES: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

PYROLYTIC METAL FILM

A metallic resistance element is deposited on a low loss ceramic carrier using a pyrochemic process developed and patented by Continental Wirt. A layer of vitreous enamel protects metal film against unusual atmospheric conditions. They are calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. Leads are securely affixed to an extremely low resistance metal contact film, assuring positive contact.

CORNING FUSION-SEALED RESISTORS—TYPE NF

Corning NF Fusion Sealed Resistors have been especially designed for missile, computer, and high frequency circuits where the ultimate in reliable performance is a must.

These resistors are made by fusion sealing a glass encapsulation around a tin-oxide resistive element similar to the ones used in other Corning Resistors. This glass encapsulation has a glass-to-metal seal at the leads insuring zero moisture absorption for the unit, and providing the ultimate in reliable performance against environmental conditions. These Corning NF Resistors can even be boiled in salt water for days without affecting their electrical characteristics.

The tin-oxide film at the heart of these resistors is extremely stable, inherently impervious to moisture, and unaffected by heat of soldering or repeated overloads.

Corning NF Resistors exceed the performance required of Mil-C-10509C, Characteristic B, and are available in ¼ and ⅛ watt sizes with a resistance range from 100 ohms to 360K ohms.

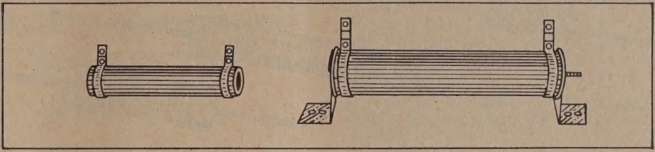
CORNING TYPE R HIGH-POWER RESISTORS TO MIL-R-11804B SPECIFICATION



Corning Type R Power Resistors have a range of 10–1,000,000 ohms, ratings of 7-115 watts, and are non-inductive. They are designed for stable long-life service under the most adverse operating conditions. Noise and frequency characteristics are exceptionally good. Moisture resistance and overload capacity are superior.

Cores — The glass tube cores are made from a PYREX brand glass insuring highest resistivity even at elevated temperatures, low expansion, and unusual resistance to chemical and mechanical attack, as well as thermal shock. The cores are impervious, and the glass has been developed to eliminate electrolysis and voltage creepage.

Resistance Film — The resistive film of metallic oxides is as rugged as the glass. It is permanently and integrally bonded to the core at red heat. Expansions are matched. The film is practically noninductive at all usable frequencies.

Terminals — Silver metallized bands are fired onto the film conductor and core. Lug-type terminals of silver-plated copper alloy strip are expansion fitted over the silver bands to insure a perfect electrical and mechanical junction.

Silicone Coating — The coating is tough, moisture and acid resistant, and a good conductor of heat. It adds to the thermal shock resistance but is not essential to overall performance.

Mounting Brackets — These are supplied with the resistors at extra charge. They are made to MIL-R-11804B requirements.

Range — Resistance range varies with size and power. It is summarized on Table I. Standard tolerance is ±5% for striped or spiraled units..

Ratings — Power ratings are based on 25°C. operating ambient. Maximum operating ambient may be as high as 200°C. and hot spot temperature 235°C.

Temperature Coefficient — The value of temperature coefficient in the range of 25-85°C. is less than ±.035% per deg. C. Type R resistors meet the requirements of MIL-R-11804B.

Stability — The average change of resistance after 500 hours operation at maximum dissipation at 25°C. ambient is 4%.

Overload — A standard 5-second overload of 6.25 times the rated power causes a permanent resistance change of less than 0.5%.

Humidity — Type R resistors more than meet the specifications for maximum resistance change of MIL-R-11804B.

Voltage Coefficient — The voltage coefficient averages less than .001% per volt.

Noise — Available data show an inherent noise level of less than .1 microvolt per volt.

Frequency Characteristics — The thin film construction of R type resistors makes them inherently noninductive. Inductance is of the order of magnitude of that of the terminals. They are particularly suited to sharp pulse work.

Design Information — The power ratings in Table I are for horizontal operation. When vertically operated, the dissipation may be safely increased by about 12%. Power ratings may be increased 4 times by forced air cooling.

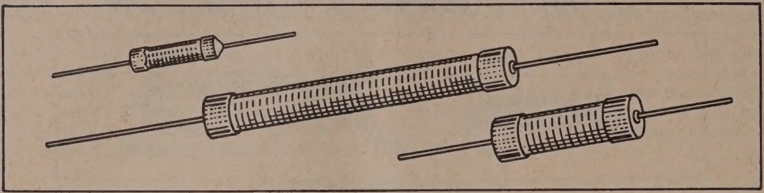
CORNING FIXED FILM RESISTORS—TYPE S



CORNING S TYPE RESISTORS
Mil-R-11804C, Characteristic P

Corning S Type Resistors have been especially developed to meet the problems of reduced space and high ambient temperatures. These resistors are applicable in miniature power units, computers, missiles, aircraft instruments, and other circuits where weight or shelf life are important.

These Corning resistors may be used at full rating at 120° C ambient, or may be used at double rating at 40° C ambient for miniaturized power applications.

Power Rating—Full rating at 120°C ambient. Double rating at 40°C ambient for miniaturized power applications. See derating curve.

Temperature Coefficient—The value of temperature coefficient in the range of −55°C to +235°C, referred to 25°C, is less than ±0.03% per °C.

Shelf Life—One year of aging shows less than 0.1% resistance change.

Noise—The magnitude of noise level is 0.1 microvolt per volt.

Frequency Characteristic—Non-inductive up to and over 250mc even when spiraled. The capacitative component varies from 0.2 to 0.8 uuf.

Low Temperature Exposure—Average resistance change after operation at −65° C for 45 min. is 0.03% and is guaranteed less than 1.5%.

Effect of Solder—Average change due to normal soldering is 0.02% with maximum change less than 0.5%.

Voltage Coefficient—Voltage coefficient averages less than 0.001% per volt.

BREAKTHROUGH! IN THERMISTOR DESIGN

Fenwal Electronics' new "identical" thermistors permit complete interchangeability! What do you need from a thermistor in the way of performance? Reliability? Extreme stability? High shock resistance? Long life? Fenwal Electronics can supply it. But Fenwal Electronics' thermistors provide an additional important characteristic all their own: **they can be supplied with identical resistance temperature curves.**

That means that now, for the first time, you can have complete interchangeability. It means you can rely absolutely on consistently accurate resistance changes versus temperature of Fenwal Electronics' thermistors. It means also you can now achieve accurate, multi-point temperature indication or control through a single system without having to calibrate out each individual sensor.

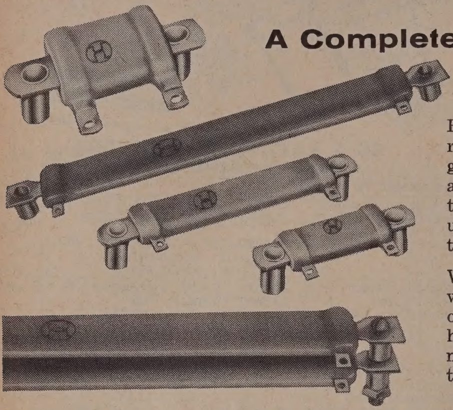
BLUE RIBBON RESISTORS



A Complete Line of Flat and Stack Mounting Power Resistors

Blue Ribbon wire-wound power resistors are made of quality materials with matched coefficients of expansion and are covered by H-H gray vitreous enamel for complete protection against environment and overload. The aluminum through bracket improves heat dissipation, minimizes hot spots, and allows a higher wattage rating per unit of space. Bracket construction facilitates stacking and adds additional space saving.

When BR resistors are stack mounted they must be derated to keep within rated operating temperatures. Watt ratings shown are based on the use of a steel panel 10 inches square x .040 thick supported horizontally. For non-metallic panels reduce rating 15%. When mounted as described in an ambient temperature not exceeding 40°C the maximum temperature rise of the resistor will not exceed 300°C.

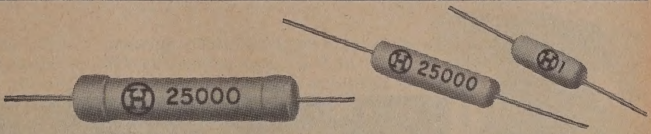
HARDWICK, HINDLE · INC AXIAL-LEAD RESISTORS

The Quality
INDUSTRIAL LINE
since 1924



The "free air" wattage ratings of these axial lead resistors are based on a hot spot temperature rise of 300°C. (540°F.) in an ambient temperature not exceeding 40°C. (104°F.). These are the finest quality vitreous enameled wire-wound resistors made with application-tested parts and employing precision assembly. Since parts have matched heat expansion, crazing and cracks are eliminated. All welded construction.

Standard Sizes:

HARDWICK, HINDLE · INC
ADJUSTABLE RESISTORS

The Quality
INDUSTRIAL LINE
since 1924

This resistor, embodying features originated by Hardwick, Hindle possesses the many advantages of Vitreous Enamel Construction, plus an adjustable feature. The winding is closely and evenly spaced, assuring ample insulation between turns. Where winding is exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with adjustable band.

Outstanding Features

- Highly perfected "bus bar" brush construction—affording minimum resistance to collector ring.
- Contact arm tension automatically adjusting for continuous pressure over winding surface.
- Greater safety factor due to high temperature enamel.
- Higher terminal strength with strong corrosion resistant alloy.
- Minimum number of parts in new trouble free design.
- Designed to comply with current standards of:
  - (a) Military Specifications MIL-R-22
  - (b) E.I.A.
  - (c) N.E.M.A.
  - (d) Listed by Underwriters Laboratories, Inc. (Types H-50 through and including H-150)

Hardwick, Hindle rheostats are exceptionally rugged without being over-designed or dependent on untried principles of construction. They exhibit "market quality" characteristics to meet the most exacting specifications, and special design features assure long life and protection under extremes of humidity and abnormal atmospheric conditions. The "buss bar" contact arm automatically adjusts for complete, continuous contact, and smooth, flexible control. Our blue-gray, high temperature enamel—thermo shock proof—gives increased service life with an extreme factor of safety.

In addition to the complete standard line of rheostats listed at the right, Hardwick, Hindle, Inc. welcomes the opportunity to work with you in the development of rheostats or potentiometers to your specifications. Tapered windings, tandem assemblies, special resistances, and many other electrical or mechanical modifications can be supplied.

Hardwick, Hindle rheostats are packaged one unit per box.

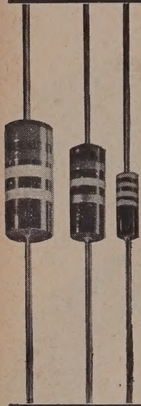
G-H RESISTORS — CAPACITORS

HIGH QUALITY
FIXED COMPOSITION

PAPER DIELECTRIC
CUSTOM MANUFACTURED

5% and 10% TOLERANCE, ½, 1 and 2 WATT RATINGS



2W 1W 1/2W (ACTUAL SIZE)

Fixed composition resisters of highest quality, feature permanent electrical characteristics, small physical size for a given wattage rating, great mechanical strength. Leads are differentially tempered—prevent sharp bends near the resistor body while still permitting easy forming to fit a particular wiring arrangement.

Resistor bodies are molded brown phenolic with coding in brilliant colors.

These resistors are now supplied in attractive new containers. Three convenient sizes with pull-out sections accommodate standard quantities of ½, 1 and 2 watt resistors.

A G-H innovation, Gold and Silver container ends, permits instant identification of 5% or 10% tolerance units. Quantity, wattage and resistance values are also clearly printed on these ends. These attractive black and green containers with Gold and Silver ends provide a space-saving, functional shelf display.

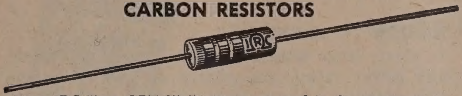
IRC®

INSULATED RESISTORS

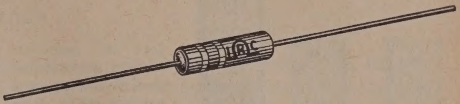
TYPE GBT-SR FIXED COMPOSITION CARBON RESISTORS



More IRC Type GBT-SR Resistors are used in the electronic industry than any other brand of fixed composition resistors. For original equipment, IRC GBT-SR's are by far the leading choice of Electronic Engineers—particularly since the new GBT-½ ½ watt and GBT-1 1 watt give new appearance, new sizes . . . IRC's unsurpassed solderability has been maintained and no wax coating to gum up end equipment. For replacement, Service Technicians favor IRC GBT-SR's over all other brands combined.

IRC's exclusive filament-type resistance element is combined with superior construction features to provide a stable resistor of extremely low operating temperature and excellent power dissipation in a compact, light weight, fully insulated unit.

TYPE BW INSULATED WIRE WOUND RESISTORS



Type BW's are exceptionally stable, inexpensive wire wound resistors for low range requirements. These small, completely insulated units are similar in appearance to insulated composition resistors but are readily identified by the double width of the first color code band.

The wire element is uniformly and tightly wound on an insulated core. Tinned, solid wire leads are keyed to the element by a specially designed terminal. Leads are anchored inside the insulation and cannot turn or pull loose.

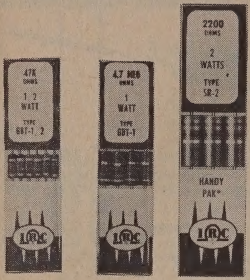
IRC HANDY-PAKS and extra value premium kits



Each IRC Handy-Pak* contains several carbon composition resistors of one type and resistance value . . . to save you unnecessary shopping.

Three types include: 6 ½-watt resistors; 4 1-watt resistors; and 3 2-watt resistors.
*Patent Pending

New IRC Handy-Paks were designed with the up-to-date Serviceman and efficient technician in mind. Here is the neatest, most compact resistor package available in the whole electronics industry. And it is exclusive from IRC. Fussing and fuming over stocking small parts is all over as far as carbon composition resistors are concerned. IRC Handy-Paks are easier to buy, easier to stock and easier to use. Ready for you now . . . added convenience for the world's finest resistors.

EASIER TO IDENTIFY!

In clear, large letters the type, resistance value and power rating are printed on every Handy-Pak. Correct identification is fast and certain with Handy-Paks.

QUICKER TO FIND!

In any stocking arrangement, Handy-Paks can be quickly indexed by power rating and resistance. Your resistor stock remains orderly from the time you buy it until you use it.

HANDIER TO USE!

IRC Handy-Paks open at both ends. The package slides out of the slimline plastic sleeve. Simply withdraw one or more resistors and slide the package back into the protective shield. Leads are kept straight, and resistors are always factory-clean.

EASIER TO CHECK INVENTORY!

The actual resistors are clearly visible. You always know what you have. Identification tab tears off conveniently for reordering reminder.

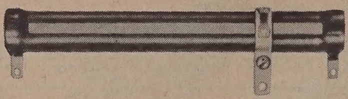
IRC RESISTEG COATED ADJUSTABLE POWER WIRE WOUND RESISTORS



The adjustable feature of these IRC resistors provides an ideal solution to odd resistance values and to handling a variety of line voltages. For voltage divider applications, one or more adjustable bands may be used.

IRC adjustable power resistors are standard Resisteg coated tubular units with a track of exposed wire to allow for adjustment. Adjustable resistor wattage ratings apply only when all the resistance is in the circuit. Resistor should not be adjusted with voltage applied.

TYPE 2DA 25 watts. Core size: 2" long x 9/16" dia. Terminals: 12A. One adjustable band: type X-2. Resistance tolerance: ±10%. Mounting hardware included: Z-1 brackets. Standard package: 1.

IRC RESISTEG COATED FIXED POWER WIRE WOUND RESISTORS

MILITARY STYLE POWER RESISTORS

IRC's exclusive Resisteg Coating accounts directly for the superior stability of IRC power resistors. This coating is cured at temperatures below 205°F.—1000° less than required for other type coats. With low temperature curing, winding turns do not shift together. The wire is not "work-hardened" since excessive tension is not needed to prevent shifting. There are no failures from arc-over. And, RESISTEG COATED POWER RESISTORS NEED NO DERATING—even at high resistance values they operate at FULL RATED POWER! Low-temperature cured. Resisteg is an exclusive IRC feature.

RW29V 11 watts, military stamping, no hardware. Standard package: 1.

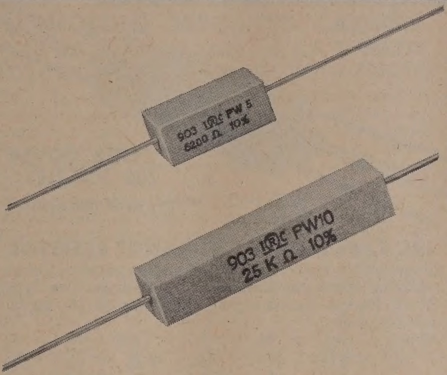
IRC AXIAL LEAD POWER WIRE WOUND RESISTORS



903 IRC PW 5
6200 Ω 10%
903 IRC PW10
25 K Ω 10%

These popular axial lead power resistors are the industry favorites for 5 and 10 watt applications. The compact shape fits among other components more easily. The axial lead design speeds installation. And, the superior solderability of the terminals assures sound connections every time.

A precisely wound element is sealed in a ceramic case—fully protected and insulated. Conservative rating permits continuous operation at full power. Resistance, wattage and tolerance are permanently marked on resistor body. Standard tolerance is 10%.

Popular Assortment of 20 PW10 resistors is available for handy bench stock. The values are selected on the basis of 10 watt usage. Resistors are mounted on plastic covered card with hole for hanging. Assortment 20A.

UNMOLDED AND MOLDED DEPOSITED CARBON RESISTORS

UNMOLDED DEPOSITED CARBON

TYPE DC 1% ACCURACY. ½, 1, & 2 WATTS STYLE RN20X, RN25X, RN30X (MIL-R-10509B)

IRC Deposited Carbon Precision Resistors offer a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores to produce a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits.

Deposited Carbon Presistors provide a combination of characteristics not found in any other resistor type. The wide range of values, accuracy, high stability, low voltage coefficient, excellent frequency characteristics, predictable temperature characteristics, high voltage rating, low noise level and small size of PRESISTORS make them superior to many popular applications.

IRC Type DC Deposited Carbon Presistors are available in three sizes: ½ watt (body size 9/16″ x 3/32″), 1 watt (body size 15/16″ x 9/32″), and 2 watts (body size 2 1/16″ x 9/32″). Accuracy ±1% (25°C).

MOLDED DEPOSITED CARBON

TYPE MDC 1% ACCURACY. ½ WATT STYLE RN70B (MIL-R-10509C)

IRC's Molded Deposited Carbon Presistor is a precision film type resistor that incorporates the added advantages of a fully insulated unit. The molded insulation provides improved load life characteristics, better insulation resistance and greater resistance to moisture effects. The Molded Deposited Carbon Presistor provides all the advantages of the ceramic solder sealed types without the hazards of seal leakage, breakage and low dielectric strength.

Type MDC Molded Deposited Carbon Presistors are particularly suited for applications where an unmolded deposited carbon unit cannot be used due to the risk of mechanical damage to its coating, insulation breakdown and excessive moisture conditions.

Wattage Rating: ½ watt at 70°C. ambient (per MIL-R-10509B) derated to 0 at 165°C. Dimensions: 23/32″ x ¼″ (body size).

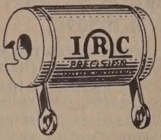
IRC® PRECISION WIRE WOUND RESISTORS



IRC Precision Wire Wound Resistors are designed and manufactured to exacting standards necessary to insure consistent accuracy in critical applications.

The ceramic winding forms have high insulating qualities, high mechanical strength and low coefficient of expansion. Insulation provides greater humidity protection and also contributes to longer trouble-free service.

Maximum temperature coefficient of .0027% per degree C is standard on all IRC Precision Wire Wound Resistors at no added cost.

IRC Precision Wire Wound Resistors have either radial lug or radial lead terminal, designed to eliminate any strain on the winding. These terminals offer excellent solderability.

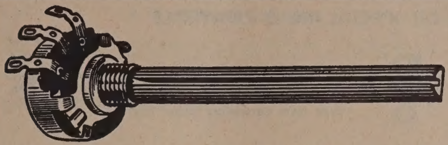
RADIO-TV TECHNICIANS' TYPE Q VOLUME CONTROLS



IRC's Type Q Control is the basic control for servicing all sets, It is carefully engineered to meet most replacement requirements with a minimum stock. The quality appearance and "cushioned turn" of the Q Control assure customer satisfaction. Easier installation and dependable performance provide more profitable servicing.

KNOB MASTER STANDARD FIXED SHAFT

Standard shaft is knurled, flatted and slotted and fits most knobs without alteration. For knurled or spring type push-on knobs, cut to length. For over-size, worn or web type knobs, split shaft slot lengthwise and spread ends. For positioned knobs, bend down control locating pins and rotate control base for correct knob position.

¼" LONG BUSHING

Shorter bushing and compact 15/16" design suit Q Controls to all small sets, yet handle large set needs as well.

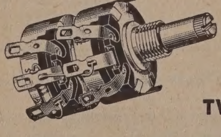
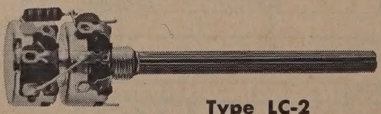
SPECIAL PURPOSE CONTROLS



Type QJ-3
TV ATTENUATOR

- Reduces overloading effects on TV sets in strong signal areas.
- Diminishes interstation interference caused by nearby or powerful stations.
- Minimizes buzz due to high signal level in intercarrier systems.
- Permits easy adjustment of signal RIGHT AT SET.
- Frequently prevents mismatch of antenna load to set.

IRC's QJ-3 TV Attenuator permits ready adjustment of signal input to TV sets. In most cases, it corrects or substantially reduces such conditions as:—Adjacent channel interference, background picture on weaker stations, poor definition, picture and sound breakover. Also useful in service work—duplicating fringe area signals when shop is near strong local station.



Type LC-2
LOUDNESS CONTROL

A continuously compensated control that boosts lows and highs as volume is decreased—maintains depth and brilliance even at whisper level. Type LC-2 replaces makeshift compensating units—tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Automatically maintains proper balance of all frequencies in the audio spectrum at any listening level. Simplicity itself—as easy to wire into an audio circuit as any standard three-terminal volume control. Complete instructions included, showing applications. Type 76-1, 76-2 or 76-4 switch can be added to this control.

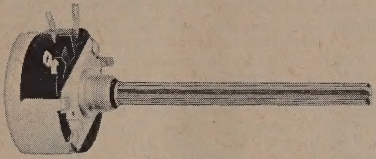
UNIVERSAL WIRE WOUND CONTROLS

4 WATT WIRE WOUNDS

International Resistance Company's new Universal Wire Wound Control, engineered to handle all 2-watt and 4-watt requirements, may be used as a replacement for former types W, WK, 4WK, and 4WS.

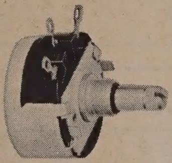
Dimensions: 1¼" in diameter, 45/64" deep behind mounting face without switch; 1-7/32" with switch.

Available in the following types:



TYPE WPK

⅜-32 x ¼" long bushing with popular Q Type Knob Master Shaft 3" long from mounting face.



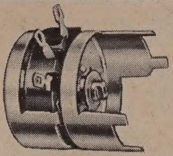
TYPE WPS

⅜-32 x ¼" long bushing with combination finger knurl and screwdriver slot shaft ¾" long from mounting face.

Switches are available for use with types WPK and WPS. Windings are not compensated and the resistance in approximately 15% rotation will be lost.

Switch type 76-11 SPST

Switch type 76-12 DPST



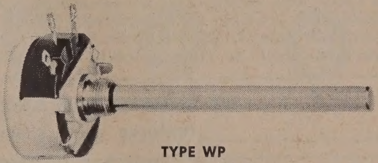
TYPE WM

Type WM Universal Wire Wound Multi-sections. Adds to WPK or WPS to make dual or triple section controls. Supplied assembled but may be assembled in field by use of WM Kit and desired WP Base-Element. Switches cannot be used.

PARTS KIT FOR WPK-WPS

Package of parts which, with addition of desired WP Base-Element, will assemble WPK or WPS Controls. Includes shaft, bushing, cover and coupling plate.

SK4—Parts kit for WPK Control
SK5—Parts kit for WPS Control



TYPE WP

Constructed with ⅜-32 x ⅜" bushing and ¼" diameter, full round shaft 3" long from mounting face.

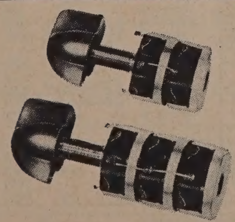
STANDARD TAPERS

L Taper—Left Hand Taper with approximately 15% of total resistance at 50% rotation when measured from Left Terminal to Center Terminal facing shaft end of control with terminals down.

R Taper—Right Hand Taper with approximately 50% rotation when measured from Right Terminal to Center Terminal facing shaft end of control with terminals down.

U Taper—Standard Linear Taper.

L AND T PAD CONSTANT IMPEDANCE CONTROLS



For use in sound systems and for speaker control. Handle up to 10 watts of audio power (3 watts D.C.) L Pad provides constant input impedance; T Pad provides constant input and output impedances.

IRC L and T Pads provide unusual convenience features small size: Diameter—1¼"; depth behind panel—1⁹⁄₃₂" (L Pad) and 1²⁷⁄₃₂" (T Pad). ⅞" bushing mounts Pad on panels up to ¾" thick. Interchangeable bushing available for metal panels. Shaft length is correct for knob supplied—no shaft cutting necessary.

Each IRC Pad is individually boxed and includes knob and dial plate.

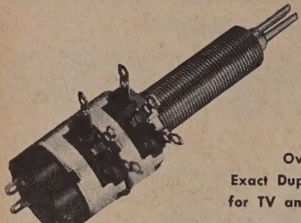
TELEVISION AND AUTO SET CONTROL ACCESSORIES



Over 1250
Exact Duplicate Controls
for TV and Auto Radios

For those who prefer factory-assembled special controls, IRC provides an exceptionally broad line of over 1250 Exact Duplicate Controls. Each control is specified closely to manufacturers' original control specifications—required. Carbon and wire-wound elements are used for panel and rear sections as required.

The IRC Exact Duplicate Line now includes over 240 concentric dual controls for auto radios. Modern in design, these new controls bring many unique and desirable features to provide convenience, economy and long life. The new IRC Printed-Silver Tone Switch eliminates contact fatigue—assures positive, no bump contact. Simple detent assures positive positioning independent of switch action. Control position feature of 7/16″ and ½″ bushings permits exact duplication of original. Short control depth fits most crowded locations. Power switches amply rated for both TV and Auto Radios. Consult Howard A. Sams Replacement Manual (RGC-2 or later) or S020F Numerical Listing for needed controls.

IRC CONCENTRIKIT ASSEMBLES EXACT DUPLICATE CONTROLS
features quick assembly—no modification of parts.

17 Basic CONCENTRIKITS

IRC Concentrikits are the common parts to various types of Exact Duplicate Controls. When assembled with parts shown in Howard A. Sams Replacement Manual (RGC-2 or later), they will produce any IRC Exact Duplicate TV or Auto Radio Controls. No cutting or filing of shafts or bushings—one minute assembly.

CONCENTRIKIT BASE-ELEMENTS

A relatively small stock of CTS-IRC Base-Elements provides a very wide coverage of electrical requirements of many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts.

Two types of Base-Elements are available:

Type B—Carbon Base-Elements can be assembled with Q parts to make up Q Control or with Concentrikit parts to make up TV and Auto Controls.

Type W—Wirewound Base-Elements can be assembled with parts into standard controls or used with Concentrikit for TV concentric dual controls.

Two Base-Elements are required for each concentric dual.

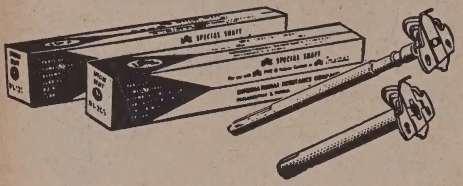
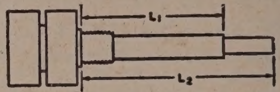
CONCENTRIKIT EXACT DUPLICATE SHAFTS

DEPENDABLE MECHANICAL FIT FOR YOUR TV REPLACEMENTS



Save time—be assured of accurate fit! IRC now provides a complete line of Exact Duplicate Shafts for CONCENTRIKIT—factory-tailored for dependable mechanical fit. No filing, slotting, soldering or cutting required! Many shafts are flatted as well as slotted to provide wider replacement coverage. Each shaft is a complete assembly, including contactor. Factory-lubricated, packaged in cellophase and in individual carton.



Exact Duplicate Shaft Stock Numbers indicate shaft length measured from mounting face when installed in control (L_1 is Outer Shaft length; L_2 is Inner Shaft length). First digit is number of whole inches in shaft length; remaining two digits indicate number of additional 32nds of an inch. Thus, P1-210 has shaft lengths of 2-10/32″ or 2-5/16″. Exception is Inner Shafts when used with K-3 CONCENTRIKIT where 3/32″ should be subtracted to determine shaft length.

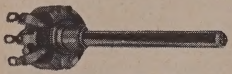
INDUSTRIAL CONTROLS

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact 15/16" Q Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜" bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

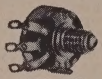
SINGLE CONTROLS



TYPE PQ

TYPE PQ. Full round ¼" shaft, approximately 3" from mounting face, with ⅜" long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix **PQ.**

TYPE RQ. Very short screw-driver slot shaft, ¼" diameter and approximately ½" long from mounting face with ⅜" long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix **RQ.**

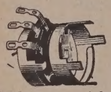


TYPE RQ

TYPE RQL

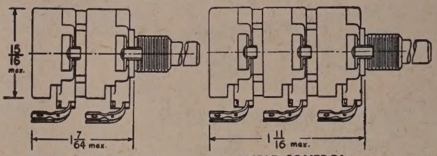
TYPE RQL. IRC's new line of 10% tolerance Locking Type Bushing Controls. Screw-driver slot shaft ¼" diameter and approximately ½" long from mounting face, with a ⅜" split type bushing, and locking nut.

MULTISECTIONS



IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ, RQ or RQL Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Available in a selection of 25 values, as shown in following table. Each MULTISECTION adds 13/32" to basic control.

MULTISECTION DIMENSIONS



DUAL CONTROL **TRIPLE CONTROL**

DUALS AND TRIPLES

IRC Type PQ, RQ and RQL Industrial Controls are supplied as single controls. Duel Control and Triple Control combinations are available by adding IRC MULTISECTIONS.

LECTROHM

INCORPORATED • CHICAGO 30, ILLINOIS

LECTROHM IS CREATING NEW DESIGNS AND MATERIALS IN WIRE WOUND RESISTORS FOR NEW ASSEMBLY METHODS

In addition to supplying the electronics industry with superior vitreous enameled wire-wound power resistors in the familiar sizes and ratings, LECTROHM is producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

RITEOHM® PRECISION RESISTORS — ±1% TOLERANCE

"Riteohm" precision resistors are offered from stock in a variety of types. This distinguished line of precision resistors, finds universal application in laboratory and test equipment, in vital military and commercial equipment, in every application demanding high precision and assured stability.

SERIES 85, 86 ENCAPSULATED: Completely enveloped in a special, Ohmite-compounded resin, the encapsulated resistor offers the ultimate in stability, protection against humidity and damage. The specially enameled alloy resistance wire is pie-wound on highest quality steatite or epoxy bobbins. Series 85 features axial lead terminals. Series 86 has lug terminals. Temperaure coefficient of resistance is 0±30ppm/°C.

Voltages listed for Series 85 and 86 resistors produce the rated watts up to the established limit of 150 volts per pie. For non-standard values, closer tolerances or special construction, consult factory.

SERIES 77 METAL FILM: Consists of a thin film of special metal alloy permanently bonded to glass. This element is hermetically sealed in a high temperature tubular plastic case with a special resin. Series 77 resistors feature extremely low reactance at high frequencies, and noise level comparable to wirewounds. Useful in high frequency or pulse circuits where wirewounds are unsuitable and in high gain circuits where the noise level of composition types is excessive. Two temperature coefficients of resistance available: 0±25-ppm/°C and 0±50ppm/°C. Resistance values shown are selected from MIL Standard MS-90169, MIL-R-10509 and Bell Tel. Labs.

VITREOUS ENAMELED RHEOSTATS

Eleven sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers a range from 12½ to 1000 watts, in ratings that meet the major portion of design, production and emergency needs. Ratings of 12½, 25 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel.

The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air;* when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MOLDED COMPOSITION POTENTIOMETERS, ½ and 2 WATTS

Exceptional reliability along with small size for rated wattage, is provided in Ohmite's molded composition potentiometers. Type AB units, 1$\frac{5}{32}$″ in diameter and rated two watts at 70°C ambient, are available in a number of styles and find universal application as rheostats or potentiometers in industrial, military or other high quality electronic devices. Type AS is a new Miniature Potentiometer for miniature or lightweight assemblies. Although only ½″ in diameter, it is rated for continuous duty at ½ watt at 70°C ambient. Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low and units will pass ARMY-NAVY salt spray test, Specification QQ-M-151. Single control Type AB units extend ⅝″ behind panel; dual control 1$\frac{17}{64}$″. Type AS Miniature unit extends $\frac{11}{16}$″ behind panel. A SPST switch for Type AB units is available.

OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in *three stock sizes:* 3-Watt ($\frac{9}{16}$" x ¼"), 5-Watt (1$\frac{1}{16}$" x $\frac{11}{32}$"), and 10-watt (1$\frac{15}{16}$" x $\frac{13}{32}$") . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have 1½" tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is ±5%, 50 ohms and higher; tolerance below 50 ohms is ±10%.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

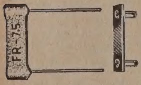
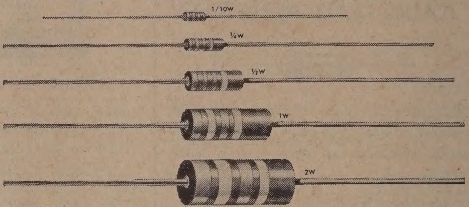
OHMITE FUSE RESISTOR



FR-7.5
Net Price $0.45 Each

Designed for replacement in all television receivers, the FR-7.5 Fuse Resistor is provided with 1½" tinned lead wires for easy installation directly in the TV circuit. May also be soldered to the plug-in terminal strip which is provided. 7.5 ohms.

OHMITE "LITTLE DEVIL" RESISTORS



All sizes have molded insulation except the 1⁄10 watt size which is coated with insulating material. Other noted advantages are great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. "Little Devils" may be used at full rated wattage at 70°C (158°F) ambient temperature.

In the ¼, ½, 1 and 2 watt sizes, "Little Devils" meet stringent government requirements (MIL-R-11B) for "best quality" characteristics. They are available from stock in the standard EIA resistance values *in the tolerances and resistance ranges shown in the price table below.* Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1⁄10 watt units, 250 volts for ¼ watt, 350 volts for ½ watt, 500 volts for 1 watt, and 750 volts for 2 watt units.

STANDARD EIA VALUES: Figures in large, bold type are ±10% EIA values. *All* values listed are ±5% values. Price table lists the various sizes and indicates the tolerances and resistance ranges in which they are supplied.

EIGHT WIREWOUND PRECISION POTENTIOMETERS AND THREE MULTIDIALS

In Stock... Available at factory prices from your local distributor

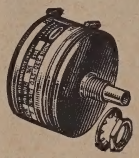
Thirty-eight electronics parts houses throughout the US and Canada can furnish off the shelf delivery of these popular models. In addition, 31 Spectrol Sales Engineering representatives located throughout the western world will assist you with special and other potentiometer requirements.

The eight precision potentiometers and 3 multidials described below satisfy most production and design requirements.

MODEL 130 1-5/16" Diameter

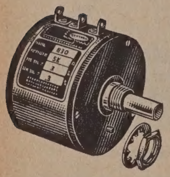
The Model 130 is a single-turn unit developed to provide economy in a quality precision potentiometer. With Spectrol's characteristic clean and rugged design, the 130 performs dependably up to 105°C and functions reliably under severe humidity conditions. It is available in resistance ranges from 10 to 30,000 ohms with a standard linearity tolerance of ±0.5%.

MODEL 230 1-3/4" Diameter



Spectrol's Model 230 high resistance precision potentiometer is a reliable single turn unit with resistance values up to 200,000Ω in a compact package only 1¾" in diameter. The Model 230 is economy priced, yet built to the highest standards of performance. For limited access phasing, the unit can be locked at any angle by simple adjustment of a single clamp screw.

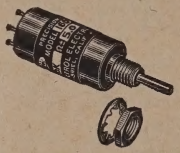
MODEL 830 1-13/16" Diameter



The Spectrol Model 830 is an economical 3-turn general purpose precision potentiometer featuring Spectrol quality and reliability at a competitive price. The 830 is available in resistance ranges from 20 to 120,000Ω with a standard linearity of ±0.25%.

The Model 830 incorporates many design features not normally found at this price. These include front and rear lids secured with machine screws; clean, smooth outline; 1000 ounce-inch stops and shaft bearings at both ends.

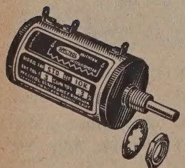
MODEL 160 1/2" Diameter



Ideally suited for applications where high resolution is needed in a small package, Spectrol's ultra miniature 10 turn precision potentiometer is available with up to 100,000 ohms in a metal sheathed half-inch diameter.

Tough and reliable, the economy priced 160 is a precision instrument made to the highest standards of potentiometer construction.

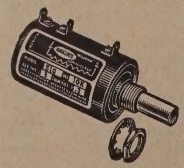
MODEL 500 7/8" Diameter



The Spectrol Model 500 is a quality 10-turn miniature precision potentiometer only ⅞" in diameter with ⅛" diameter shaft. It is available in resistance ranges from 25 to 120,000Ω with a standard linearity tolerance of ±0.25%.

Definite superiority of design guarantees low-noise performance and consistently reliable operation. Low starting torque, low running torque, high resolution, and close linearity are achieved by new and improved construction, both inside and out.

MODEL 510 7/8" Diameter

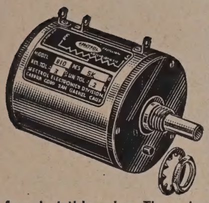


The Spectrol Model 510 is a quality 10-turn miniature precision potentiometer only ⅞" in diameter with ¼" dia. shaft. It is available in resistance ranges from 25 to 120,000Ω with a standard linearity tolerance of ±0.25%.

Featuring a new type of construction, the 510 readily adapts itself to high volume production techniques allowing overall reduction in manufacturing costs.

SPECTROL ELECTRONICS CORPORATION

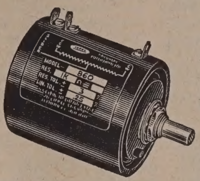
MODEL 810 1-13/16" Diameter



The Model 810 is the result of a development program to produce a competitively priced 10-turn precision potentiometer and maintain the Spectrol quality and reliability. The 810 is available in resistance ranges from 50 to 400,000 ohms with a standard linearity tolerance of ±0.25%.

This economy model incorporates many design features not normally found at this price. These include front and rear lids secured with machine screws, clean, smooth outline, 1000 ounce-inch stops and shaft bearings at both ends. A new design throughout with emphasis on consistent performance.

MODEL 860 1-13/16" Diameter



The Spectrol Model 860 precision 10 turn potentiometer is made especially for applications where low price plus steady, dependable operation is of prime importance.

Available in a resistance range from 50 ohms to 400K ohms, with std. linearity of ±0.25% and special linearity of ±0.1%, the tough 860 is the best buy for those "work horse" pot jobs.

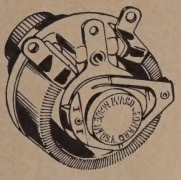
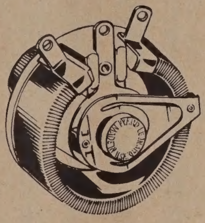
WARD LEONARD



TYPE 25R

TYPE 50R



25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on ¼″ panel.

semiconductors by Amperex®

for industrial, communications and entertainment applications . . . a complete line, featuring:

Amperex P. A. D. T. Post Alloy Diffused VHF Transistors for converter, mixer and oscillator applications

Amperex P-N-P and N-P-N transistors for audio, computer and switching applications.

Amperex germanium and silicon diodes, including silicon reference and power rectifier types

Implemented and fully proven by Amperex, a unique manufacturing technique originating with Philips of the Netherlands now enables Amperex to provide you with production VHF Post Alloy Diffused Transistors of unparalleled laboratory quality at truly reasonable prices.

The new Amperex "Post-Alloy-Diffused" P-N-P Transistors combine the best qualities of both the alloy and the diffusion approaches to transistor construction. As a result of the special "self-jigging" techniques, a maximum degree of uniformity is achieved, thus eliminating the need for "selection."

Correspondingly, special Amperex precision tooling methods and fully automated high volume manufacturing equipment, are the user's guarantee of a complete line of semiconductor diode and UHF transistor types offering maximum stability, reliability and uniformity at minimum cost.

The accelerated development of new Amperex transistor and diode types and the unlimited availability of those presently listed, is further assured by the inauguration of a new Amperex semiconductor plant in Slatersville, Rhode Island.

The facilities of the Amperex applications laboratory and the Amperex R & D laboratory are always available to customers for consultation on applications problems.

VIBRATION CHARACTERISTICS

To determine the vibration characteristics of BUSS and FUSETRON fuses, a costly Caladyne Vibration System has been installed.

This system permits the evaluation of the vibration characteristics of Small Dimension fuses at cycles of 5 to 2000 per second and acceleration levels up to 30g (vector) or with displacements up to 1/2 inch double amplitude.

Tests with this equipment have permitted great improvement in the designing of fuses to withstand vibration.

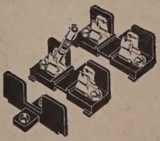
BUSS Add-On Fuse Blocks for $^{13}/_{32}$ x 1½ inch Fuses

Single-pole fuse blocks and separate end barrier assemble into a unit block of one or more poles. Units lock in position. Assembled block becomes a single unit.

Each fuse can be used as a disconnect. See illustration. Raised fuse identifies open circuit and prevents confusion in getting right fuse back in circuit.

Marking strips so each circuit can be identified available.



No.		
3949	Assembly consisting of one No. **3742** End Barrier —plus specified number of No. **3743** One-Pole Blocks	
3742	End-Barrier Only	$ .30
3743	One-Pole Block Only	1.50
	Marking Strip in 50 inch lengths	$0.55 per length

When ordering, be sure to specify number of End Barriers and number of One-Pole Blocks desired. Only ONE End Barrier is required for each assembled fuse block of any number of poles.

Other standard and special fuses, fuse blocks, fuse clips and fuse holders

If the fuses, fuse blocks, fuse clips and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

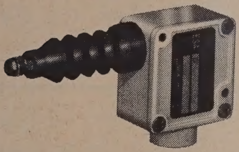
LIMIT SWITCHES ES4 type



Especially designed for machine control, automation circuitry and sequencing operation. Aluminum diecast housing protects switch from damage, dirt and corrosion, simplifies mounting on equipment. Some models available with neoprene boot on plunger for protection from dirt, oil and metal chips. Impulse models eliminate need for one-way dogs, complicated relays and timers. As plunger is depressed, switch completes electrical circuit during pre-set section of travel ("ON" period), but does not make circuit on return stroke. Case size: 2″ (plus plunger length) x 1 1/32″ x 2 3/16″. Rating: 10 amps, 125/250 VAC. Circuit: SPNO.

Snap-Action, Momentary Contact

The exclusive Hetherington snap-action mechanism reduces arcing and contact wear... provides far greater current capacity than the small sizes of these switches would indicate. Mechanism enclosed in dust and moisture-resistant anodized aluminum housings (phenolic in B2001 & B2002). 1-piece terminals and contacts firmly anchored to bases. Many types meet JAN and MIL Specs for aviation and military requirements.

Features and dimensions are subject to change based on engineering refinements. If dimensions or specifications are critical, obtain drawings from Control Switch engineering department.

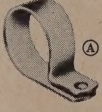
PLASTIC CABLE CLAMPS



Electrocraft Cable Clamps are excellent for fastening cables, harnesses, tubing, etc. The Ethyl Cellulose clamps are designed for normal industrial and commercial application. They are tough, have good electrical properties and may be used where temperatures do not exceed 185°F. They have a low temperature limit of —40°F. The Nylon (Zytel) clamps are specifically designed for application where extreme durability and high resistance to temperature (—60 to 300°F) is required. They are also resistant to most chemicals.

Insulation between the switch and its actuating solenoid is provided by a 2 to 12 inch puller rod providing 40 to 140 kv insulation. CE grade phenolic laminate is recommended for dc or 60 cycle use. Grade G7 silicone glass laminate is recommended for radio frequency applications.

LEVER ACTION SWITCHES AND UNIQUE MOLDED SWITCHES

3-, 4-, 5-, and 6-Position Lever Switches — Time-saving Ring-Contact Rotaries — 6-Pole DT per Deck

SS-14-IL4F-2
Two-Deck Lever-Action Switch

SINGLE DECK, POSITIVE INDEXING, 3- and 4-POSITION. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw, and provide for an extra circuit. Individually-boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. Spacing between centers: recommended ¾"; minimum 9/16". For dimensions, see drawing below.

Spring Return Type. Single deck, 3-position switches may also be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10.

Two Deck. Same basic construction and packaging as single deck. Spacing between centers: recommended, 15/16"; minimum, 13/16". ⅜" between decks matches TV twinlead wires.

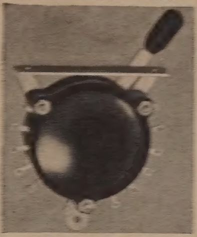
5-Position Lever Switch



MOLDED 5- and 6-POSITION, POSITIVE-INDEXING. Designers and servicemen now have available 5 or 6 live positions, two circuits per deck, in an enclosed lustrous black molded construction. Both switches are adapted from the MS-20 series on page 1233 and have similar electrical characteristics. Besides sound systems, these models can simplify circuitry for control, inspection, test, experimental, and hobby purposes. Individually-boxed switches come with mounting hardware and KN-20 threaded black molded knob; bulk shipments, without knobs. For mounting data see SK-64 on 5-position and SK-119 on 6-position.

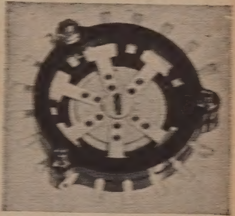
6-POLE DOUBLE-THROW PER DECK—1 OR 2 DECKS



6-Pole Switches. Double-throw switching of 6 circuits per deck through two 18° positions 36° throw) becomes easy with this unique rotary-type molded switch. It is fully enclosed and similar in appearance to the molded MS-20 switches on page 1209. The illustration at the right shows internal construction with back protective cover cut away. Circuit arrangement is designated on the metal front of the switch. Quality features include .007 ohm average contact resistance; heavy, fine-silver plating for 100-hour salt spray test; double-grip collector arms. Now available in non-shorting (break before make) and shorting (make before break). 2⅝" maximum diameter, one deck, 13/16" behind panel; two-deck, 1⅛" behind panel. DTS-Shorting Types are rated 1500 volts R.M.S. between contacts and ground, 1000 volts R.M.S. between contacts.

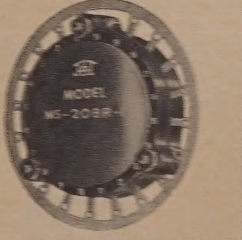
MS-20-1-6DTS, 6-pole, double-throw (1 deck), shorting	3.70
MS-20-2-6DT, 6-pole, double-throw (2 decks), non-shorting	5.15
MS-20-2-6DTS, 6-pole, double-throw (2 decks), shorting	5.40

NEW IDEA: RING-CONTACT SWITCHES



Perfect connections between adjacent switch contacts are assured because this distinctive design needs no soldered jumpers. An integral ring which holds together all the contacts on each deck can be snipped wherever wanted—to save valuable time in development and pilot runs. For production lots, J-B-T can supply various combinations of joined and unjoined contacts to slash the user's assembly costs and build-in quality. The ring-contact adds 7/32" o.d. to the MS-14 or MS-20 types listed on page 1233 (prints SK-88 and SK-89 respectively). The MS-20BR-1 shown here also has bonded (suffix B) construction. Switches listed below are normally available. Others such as 3-decks, 6-decks, shorting, etc., require substantial lead time.

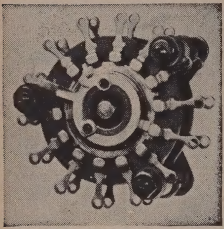
INSTRUMENT AND TESTER SWITCHES (Laminated)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting



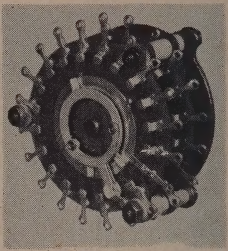
SS-14-2 Laminated

J-B-T Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available as a 14-position or a 20-position in laminated or molded types—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf type (SS-20), and sharp detent assure positive indexing. Springs of both types are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".



SS-20-2 Laminated

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; carries 1 amp., 125 volts VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts 1500 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

Military Variations—The following can be supplied on specia order at extra cost: (a) laminated plastic, Type PBE-P per Spec MIL-P-3115B; (b) vacuum impregnation of rotors, decks, spacers and ceramic spacers with approved fungicides; (c) hot tin dip o contact surfaces to be soldered; (d) 14 or 20 live positions, no off (add suffix F, as SS-14-2F or SS-20-1F); (e) common position i non-standard location.

BASIC 14-POSITION: 1¼" Bar knob (KN-14) supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) adds 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION: 2" Bar Knob (KN-16) supplied on individually packed units—not on bulk orders unless specified. **Collector Arm** placed directly opposite to flat of shaft unless otherwise ordered. **Contact Lugs** and common lugs positioned as shown below, 19 live positions per deck, standard. **One to six decks;** for each additional deck or gang add 5/16" to depth. **Continuous rotation** type supplied unless otherwise specified. **Panel locator** positioned as shown; can be modified on bulk orders.

COMBINATIONS IN SS-14 and SS-20 SERIES: In addition to the military variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, longer projections beyond bushing, and other variations can also be supplied, with necessarily longer delivery time and additional cost.

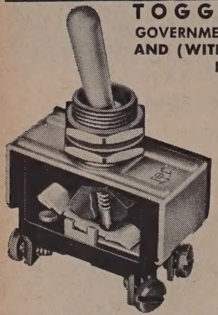
Instrument Quality J-B-T Components

J-B-T INSTRUMENTS, INC.

TOGGLE SWITCHES — HEAVY DUTY — SINGLE-HOLE

GOVERNMENT-QUALITY TYPES DESIGNED FOR JAN-S-23, DDAX SERIES, AND MIL-S-21195A (Ships) AND (WITH TOGGLE SEALS AND OTHER VARIATIONS) MIL-S-6745, AN-S-20a, AND MIL-S-3950A.



REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS

Overload . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at —85°F to 185°F.

Vibration and Shock . . . No momentary make or break or mechanical damage during severe shake and 75 G's drop tests.

High Humidity . . . Materials, dull finish on outside metal parts (per Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Quality standards are maintained by in-plant production testing.

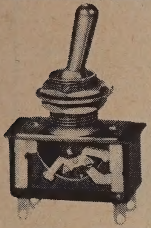
J-B-T INSTRUMENTS, INC.

TOGGLE SWITCHES—MEDIUM DUTY—SINGLE-HOLE

GOVERNMENT-QUALITY TYPES DESIGNED FOR JAN-S-23, DDAX SERIES, AND MIL-S-21195A (Ships)

Variations in construction under development for MIL-S-3950A, Series MS25098 and MS25100



6 AMP. — MEDIUM DUTY

This page covers 40 models of toggle switches nominally rated at 6 amp. at 125 VAC, 3 amp. at 250 VAC. 32 models have threaded bushings 29/64" in length; eight ¼" in length.

Single Pole - Double Pole
Single Throw - Double Throw
Side Connected - Rear Connected

Like J-B-T Switches in the rotary, lever-action and heavy-duty toggle switch fields, this ST12-27 Series has quality as its first objective. J-B-T controls quality by doing its own designing, actual manufacturing and in-plant testing of production samples.

Sound Electrical Characteristics . . . Stationary contacts are brass, heavily silver plated; double wiping contacts are phospher bronze, heavily silver plated. Tested to meet 50% overload for brief periods. Contact resistance well under 0.01 ohm requirement of military specifications. High dielectric exceeds 1000 volts r.m.s., 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at both low and high temperatures (—85°F to 185°F).

High Humidity . . . Materials, plating, construction and lubricant enable switch to withstand tropical climates.

Salt . . . Meets 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum.

Vibration and Shock . . . No momentary make or break or mechanical damage during stringent shake tests and 75 G's drop test.

Specified Plating . . . Dull finish plating on outside metal parts follows requirements of applicable Government Specifications. For substantial orders, other plating will be quoted on request.

Exceptionally Rugged Construction . . . Enclosed molded body, with no unused holes for side terminals . . . terminals in this series are all solder-type, hot-tin dipped, and withstand 5 pound pull test . . . operating cycles far in excess of minimum specified as acceptable.

Note A: AN or MS types use internal sand and dust toggle seal and high performance features involving extra cost; some models not regularly stocked.

Note B: Specification MIL-S-3950 covering suffix numbers —19 and below, has been withdrawn by the Government, and is being superseded by MIL-S-3950A which has suffix numbers —21 and above. For heavy-duty switches, specification MIL-S-3950A provides for screw terminals only. However, terminals have been prepared for soldering, and may be soldered after removing screws.

LIMITED CURRENT FUSES & HOLDERS

A new approach to circuit protection completely eliminating the possibility of overfusing circuits. This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps

The Limited Current Fuse Holder is designed to accept only the size, amperage, range and type (regular or slo blo) in its amperage range. The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

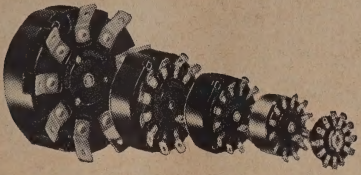
POWER TAP SWITCHES NON-SHORTING TYPE



Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

Individual gain adjustment for each channel. Transistor amplifier (powered by 9 volt battery included) overcomes usual loss of resistance type mixer and actually provides a 6 db. gain; permits use up to 30 feet from Recorder or Amp. Accepts input signals up to 1.5 volts. (Use a Switchcraft Molded Cable Assembly with proper connection to fit your equipment —not included.) Low noise level; low distortion. Response 20 to 20,000 cycles.

PART NO. 301TR **U.S.A. LIST $30.00**

TRANSISTORIZED STEREO-MONAURAL MIXER—Similar to the No. 306, except has built-in transistor amplifier in each of two Stereo channels. Provides 6 db. gain; permits use up to 30 feet from Recorder or Amp. For Stereo, requires two cables for attachment to Recorder or Amp.

PART NO. 306TR **U.S.A. LIST $37.50**

CABLE ASSEMBLY—A 3-foot long chrome-grey shielded cable with molded Phone Plug on one end, molded Phono Plug other end. Ideal for use with above Mixers where Input of Recorder or Amplifier has a standard two-conductor Phone Jack. (For other terminations, see Cable Assemblies.)

PART NO. 05AF25 **U.S.A. LIST $1.50**

"MIX-AMP"—Miniature Transistorized Amplifier designed for use with resistance type MIXERS, such as the Switchcraft "Mini-Mix" and four-channel Microphone Mixers overcoming the usual "losses" in such mixers and actually providing a 3 db. gain. When used with a "Mini-Mix", will accept signals up to 2 volts. Has a "HI-LO" Impedance Switch; in "HI" position, when used as a straight amplifier (without mixer) has a 200,000 ohm input and provides a 6 db. gain and in "LO" position has a 25 db. gain with input impedance of 5,000 ohms. Compact, approximately size of package of cigarettes; completely portable, requires 9 volt battery (included). Has standard 2-cond. Phone Jack Input and 2-cond. Phone Plug Output. Can also be used at a microphone, using cables up to 30 feet long, without serious loss of high frequencies.

Frequency response 20 to 20,000 cycles. Also ideal for Phono Pickups (Magnetic and Crystal).

PART NO. 501 **U.S.A. LIST $20.00**

"MIX-AMP"—Same as above, but Input and Output have microphone connectors (Switchcraft Series 2500 or Amphenol Series 75).

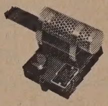
TEMPERATURE REGULATING STANDS



These automatic devices regulate and control the tip-temperature of an electric soldering iron while the iron is connected to current and at idle. The controlled soldering iron is maintained at all times at just the right heat to meet the requirements of the job or the needs of the user. Suffix "SG" after catalog number indicates stand is equipped with safety guard.

TOOLS
QUALITY SINCE 1837 ®

DESIGN IN-DUS-TRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

TEST AND INSPECTION Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

5 CORE SOLDER

MULTICORE SOLDER

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders. Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to thin rapidly produces perfect joints with less solder. Greater coverage per pound.

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies. Free from objectionable odor. Nontoxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT is one of a number of solder alloys developed for the industry by Multicore, it is entirely different—and, it is patented. SAVBIT alloy contains its own copper, and therefore will not take the copper of the soldering iron tip into the molten solution during soldering. This absorption of copper when any standard alloy is used is a basic reason for the wearing out of the expensive copper tips, and the need for constant refinishing of the tip.

Comparative tests with solders having pure tin/lead alloys and the new Ersin Multicore copper-loaded SAVBIT alloy have been made on assembly lines of electronic plants. Results of these tests have proven that startling production efficiencies and economies may be realized when the wear and corrosion of copper soldering iron tips is curbed, using SAVBIT alloy. Equally as important . . . a higher standard of soldering quality is assured for a much longer period of time.

SAVBIT alloy is available in Ersin Multicore 5-Core Solder containing non-corrosive extra fast Ersin flux in 14, 16, and 18 gauge. Its melting point is virtually the same as standard tin/lead alloys.

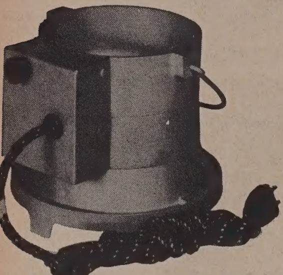
Electric Solder Pots

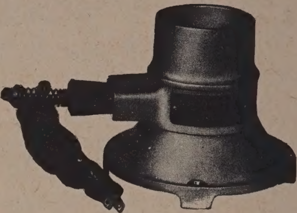
No. 12 & 12T →

This small pot is used largely for individual dipping of small parts and reaches a temperature of approximately 750°. The #12T, which has a thermostat, is adjusted normally to 400/600°. It can be adjusted to a higher temperature by the user. For higher temperatures use #36 or #60 elements.



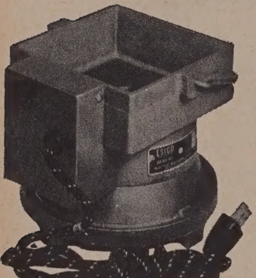
No. 70T ←

This is a thermostatically controlled pot, maintaining a temperature of 400/600°. Adjustable control permits the pot to be used anywhere between these two temperatures. See table below for details.



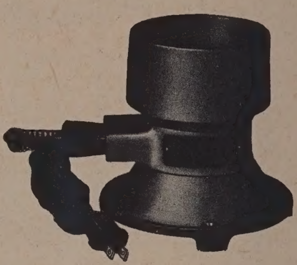
No. 36 & 36T →

This pot is used for dip soldering of bundles of lead wires. It operates at approximately 750°. The #36T has a thermostat set to 400/600°. The user; however, can adjust it for higher temperatures. The #60 element, for a hotter pot, is usable in the #36.



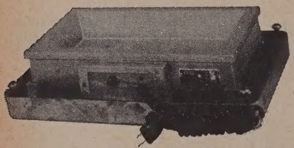
No. 75T ←

This pot is similar in operation to the #70T, but is intended for the dipping of small panels, which cannot be accommodated in a round pot. Temperature range is 400/600°. The pot is also available without a thermostat but is then catalogued as #75. Without a thermostat, the pot reaches a temperature of 850°. See table below for details.



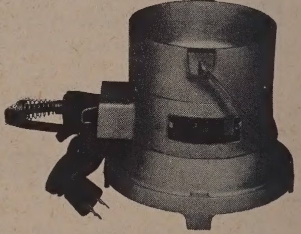
No. 60 & 60T →

This pot is used for volume tinning and operates at a temperature of 800°. On occasion where production requires greater heat drain capacity, elements of a higher wattage than the standard 325 watt have been supplied. However, we recommend the use of the #70 600W Pot for this greater heat requirement and higher temperature. The #60T has a thermostat set for 400/600°. The user can adjust the thermostat to a higher temperature. See table below for details.



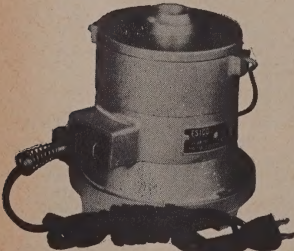
No. 80 ←

This pot is intended for printed circuit panels and is thermostatically controlled. Temperature range is 400/-600°. The pot stands on 4 corner posts in a sand tray, which has screws for leveling. See table below for details.



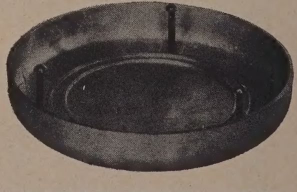
No. 70 →

This is a high heat pot reaching a temperature of approximately 900°, and has considerable heat drain capacity. Where pots are required for 220V operation, longer element life will be secured than in the case of the #60. See table below for details.



No. 90 ←

This is a high temperature pot intended for silver soldering, and will maintain a temperature of 1300/-1500°. See table below for details.



No. 1270 →

This sand tray will accommodate all of the round base solder pots shown on this sheet. The tray is fitted with leveling screws. See table below for details.

PLASTIC HANDLES-(TN-22, TN-33, TN-44, TN-55) are of Tenite II, 4" x ⅜" hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x ⅜" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. ⅛" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH—has approx. 200 bristles of stainless wire .0035 in dia. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

STAINLESS STEEL WIRE BRUSHES on steel shaft approximately 2" long over all. Can be used in a regular pin vise. **.33 net**

GREATLY EXPANDED LINE OF LONG-LIFE HEXCLAD AND XTRADUR TIPS

Last 10 to 20 times or more as long as copper tips with normal use and save maintenance cost. Have a durable coating of Iron Alloy over copper base on all surfaces for long wear. Do not erode or pit and thus deliver uniform heat. XTRADUR tips are multicoated for extra long wear by a new exclusive process. Solder adheres only to the working surface at point of tip—prevents solder dropping on components or creeping into tip hole. Eliminates costly tip maintenance. Available in all plug and screw tip sizes and shapes. 124 standard sizes and shapes, plus over 500 specials. Over 100,000 carried in stock. Can also furnish special HEXCLAD or XTRADUR tips made to your order. **Ask for Long-Life Tip Catalog For Prices And Full Details.**

HEAVY-PRODUCTION SOLDERING IRONS

(Listed by Underwriters' Laboratories)

High efficiency and reserve-heat capacity make these General Electric soldering irons well-suited for continuous-production soldering as well as intermittent duty.

Quick, dependable heating provided by General Electric Calrod cartridge heating elements.

Ironclad tips for high-speed repetitive soldering last up to ten times as long as plain copper tips. Ironclad construction combines the fast heat transfer of copper and long wearing qualities of iron.

Calorized copper tips—For **ordinary** soldering requirements, these tips will last much longer than plain copper tips.

All copper parts are Calorized—Calorized surfaces retard the harmful effects of high temperature on copper.

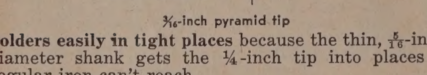
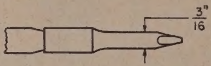
MEDIUM-PRODUCTION SOLDERING IRONS

(Listed by Underwriters' Laboratories)



¼-inch chisel tip

$\frac{3}{16}$-inch chisel tip



$\frac{3}{16}$-inch pyramid tip

Solders easily in tight places because the thin, $\frac{5}{16}$-inch diameter shank gets the ¼-inch tip into places a regular iron can't reach.

Reduces operator fatigue—Iron weighs only 8½ ounces, is well balanced and has comfortable handle.

Produces uniformly strong soldered joints because iron's quick heat recovery produces enough heat for hard, continual use.

Saves on maintenance—Fewer interruptions in production result because iron's sturdy construction and long-life ironclad tip eliminates need for frequent repairs.

Tip renewal is easy and inexpensive—Unscrew shank from handle and replace with new, low-cost assembly in seconds. New tips can be brazed to heater assembly if desired.

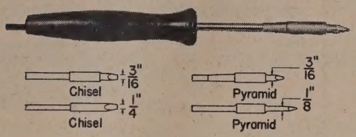
SOLDERING IRONS

LIGHT TO MEDIUM-PRODUCTION SOLDERING IRONS

(Listed by Underwriters' Laboratories)



Improves operator efficiency — Handles like a pencil, weighs only 1¾ oz.
Cuts maintenance costs—Ironclad tips last up to ten times longer than conventional tips.
Increases production — Heater is built into tip for quick heat recovery, fast heat transfer.
Provides greater versatility with four tip sizes.
Tip renewal is easy, fast—Complete tip and heater assembly can be changed in five seconds.

TRANSFORMERS

Specially designed transformers are available as optional equipment in three types. Single-tap transformer is for use where only one soldering heat is required. Four-tap transformer gives wide range of heats (from 26 to 35 watts) for close temperature control of tips. Where lower heat is required for printed-circuit-board application, the Cat. No. 6A434 transformer can be used. The low-heat tap controls the tip temperature to 575 to 600F. The medium-heat tap supplies 28 watts and high-heat tap 35 watts. Through the use of this transformer the iron is completely isolated, thus preventing injury to low-voltage components such as transistors and diodes.

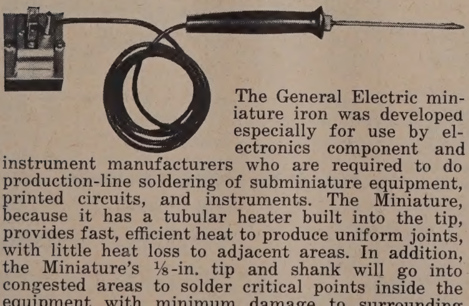
MINIATURE-PRODUCTION SOLDERING IRONS



The General Electric miniature iron was developed especially for use by electronics component and instrument manufacturers who are required to do production-line soldering of subminiature equipment, printed circuits, and instruments. The Miniature, because it has a tubular heater built into the tip, provides fast, efficient heat to produce uniform joints, with little heat loss to adjacent areas. In addition, the Miniature's ⅛-in. tip and shank will go into congested areas to solder critical points inside the equipment with minimum damage to surrounding insulation, joints, and wiring.

Improves operator efficiency — Weighs less than 1½ oz, reduces operator fatigue, increases production.

Portable — Transformer integral part of cord set, plugs into any standard 115-v outlet.

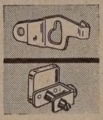
FOR PRECISION WIRE STRIPPING

Shown with optional Stop Latch (1) and Wire Stop (2)

Removes Teflon* and other hard-to-strip insulation. New "concentric hole" stripping blades and special design of jaws prevent damage to insulation and wires. Matched sets of blades are precision drilled on watchmaker's equipment to exact wire sizes. Chucking action on insulation guides conductor through stripping hole, preventing nicks and scrapes. 3 models, wire sizes from 10 to 30.

EXTRA FEATURES (optional)



"SHORT-STOP" LATCH protects wire by limiting stroke to 5/32" — disengages without removal for full 7/8" strip.

"SEE-THRU" WIRE STOP assures uniform lengths by adjusting to strip length desired.

North Hills wide band transformers have been designed for low insertion loss and good matching characteristics over wide frequency ranges. Balanced windings feature extremely low unbalanced voltage. Band width ratings are conservative.

Three case styles are offered. Series 1210 models are potted in open metal cases with a terminal board on the bottom and 6-32 spade mounting bolts. Series 1211 units are hermetically sealed with glass terminals at the case ends, and 4-40 studs on the bottom for mounting. Series 1214 units are hermetically sealed and have a single 4-40 stud mounting. A great variety of different requirements are being met by special designs. Your specifications for custom wide band transformers may be submitted for quotation.

MINIATURIZED TRANSISTOR TRANSFORMERS

The new line of miniaturized aTTom Transistor Transformers (Type TT) is the most complete series available. Consists of 47 standard values. These transformers are molded for conformance with MIL-T-27A, Grade 5, Class R for altitudes up to 50,000 feet. aTTom units have excellent response, low distortion and highest power capabilities available for its volume. Valuable chassis space is not taken up with bulky clamps. One inch long hard drawn copper-tinned leads allow for direct printed circuit mounting. Designs cover practically all applications: Interstage, output, input, single or push-pull output, reactors, line to base, collector to base or line, collector to speaker, and reversible-input to secondary.

TELEVISION COMPONENTS

Almost 500 TV replacement transformers and related components, the most complete line in the industry, are available from Chicago Standard. These include over 175 exact replacement flybacks and almost 70 power transformers, as well as yokes, vertical outputs, width and linearity coils and many other popular TV replacement units.

Ask your distributor for a free copy of the latest edition of the Stancor TV Transformer Catalog and Replacement Guide listing these units and replacement data on thousands of television sets.

STANCOR ULTRA-LINEAR HIGH-FIDELITY AMPLIFIER

Now you can build an Ultra-Linear version of the famous Stancor-Williamson high fidelity amplifier, using Stancor Ultra-Linear Output Transformer A-8072. For complete construction details see Stancor Bulletin 479.

The original Stancor-Williamson amplifier can be converted to Ultra-Linear operation by a few simple circuit changes and the installation of the A-8072. Conversion instructions are included in Bulletin 479.

Stancor supplies a set of two completely punched and finished chassis for the Ultra-Linear Amplifier; Chassis Set WM-8. $5.75 net. In addition to Ultra-Linear Output Transformer A-8072, $16.60 net, this amplifier uses power transformer PC8412, $12.55 net and filter choke C-1411, $5.67 net. The other components used cost about $30.00. They are all stock parts and can be readily obtained from your Stancor distributor.

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ±1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting, is used. Shipping weight is 6.5 lbs., except A-8098, shipping weight 3.2 lbs.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

CHICAGO STANDARD TRANSFORMER CORPORATION

SMOOTHING CHOKES FOR D.C. POWER SUPPLIES.

Inductance varies with the amount of D C. flowing through the coil, therefore these units have been tested under uniform conditions. They are rated at 10 volts, 60 cycles, with maximum D.C. in winding. Tolerance of plus 15% is maintained on all ratings.

*Transformers and Rectifiers will have a higher temperature rise when operating with a capacitive load as compared to a resistive or inductive load for a given load current. If this is undesirable extra ventilation should be provided or else the output current from the rectifier should be derated by approximately 20% from the values shown.

PLATE TRANSFORMERS—NEW FUNCTIONAL UNITS

No exposed terminals. Insulated leads provide protected routing to circuits. Simplified design offers ease of mounting and neat, convenient circuit wiring. No difficult cutouts needed. Each of these units is "all transformer," taking a minimum of chassis space. No bulky casing or protruding, "hot" terminals to increase mounting area.

D.C. output rated CCS at load terminals of single-section reactor-input filter, ICAS with single-section capacitor-input filter. Primaries for 117 volts, 60 cycles.

PULSE TRANSFORMERS

These ultra-miniature wound core pulse transformers are hermetically encapsulated 3-winding units designed and built in accordance with MIL-T-27A. They feature extremely fast rise time, minimum droop and high temperature stability. The leads are arranged so that they can be soldered directly into the circuit or clipped and plugged into a standard 7-pin miniature tube socket. Oscillograph pictures of pulses for all units and other technical data obtained through use of N.B.S. Preferred circuit No. 46, as found in Navy Aeronautical Preferred Circuits Handbook are listed in Chicago Bulletin CT-45.

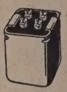
MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS



Chicago-Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in ⅞" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1¼". The case has two 2-56 threaded inserts, ¹¹⁄₁₆" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces.

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers. (16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS

HF Series

These units have a wide frequency response of 20 to 20,000 cps with ±1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Chicago-Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, *e.g.*, the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to —8 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. 1343).

STEP-DOWN TRANSFORMERS—Primary, 50/60 cycles

CHICAGO step-down autotransformers solve the problem of operating standard 117-volt radios, amplifiers, and various electrical apliances from 220-volt power sources. They are particularly well adapted to use in Central and South American countries, where 220-volt lines are frequently found, and where the **Sealed-in-Steel** construction protects them against corrosion caused by excessive humidity. Input side is equipped with 8-foot, rubber-covered cord and plug. Output side has standard female receptacle.

ISOLATION TRANSFORMERS—Primary, 50/60 cycles

A rotary switch on each CHICAGO isolation transformer adjusts to either of three primary voltages, 125/115/105 volts. With the unit operating on a 115-volt line, the three switch positions also provide varying secondary voltages, 105/115/125 volts isolated from line.

Eight-foot, rubber-covered cord and plug on primary, standard female receptacle on secondary.

BROADCAST QUALITY COMPONENTS

Modern high fidelity broadcasting and transcription equipment requires the use of "Audio" — transformers of utmost quality and reliability in performance. Freed broadcast quality components have been designed to meet these requirements. They are wide band, high fidelity components with low distortion throughout the audio range and beyond. Frequency response for most units is in the order of ± 1DB from 20 to 20,000 cps and for high level output transformers in the order of ± 0.5 DB from 20 to 30,000 cps.

These units feature astatic construction, longitudinal balance, high efficiency, uniform response, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished through the use of hum balanced coil structures and multiple alloy shielding. Equal high fidelity response is assured on every tap of any universal impedance winding without line reflection of transverse coupling.

All broadcast quality components are thoroughly impregnated in a special non-hygroscopic varnish and fully encapsulated with a moisture proof, high melting compound.

All broadcast quality components are **hermetically sealed**.

All units are tested in accordance with and meet "EIA" standards.

Almost all units are designed with universal impedance windings to insure greatest versatility.

A full line of high Q reactors complements this series of audio transformers.

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics combined with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

QGC HIGH Q REACTORS

QGC-Reactors are designed for low audio frequency application requiring very high Q and inductance stability. These units are impregnated with a special compound and mounted in **hermetically sealed** cases. A hum reducing lamination structure used in these reactors results in an extremely low pickup of extraneous stray fields. A very low temperature coefficient is achieved by a specially developed impregnation and assembly process. All QGC High Q Reactors have an extremely low voltage coefficient.

All Resistance values are nominal and can vary by ±20%.

Inductance values are given within ±2%.

Closer Tolerances and Inductances other than the standard Catalog items can be supplied on special orders.

Inductance Values up to 400 Henries can be supplied.

The graphs showing the coil characteristics make use of the following formulas:

1. "Q" versus frequency was measured with voltages given by the expression:

   $$V = K \frac{\sqrt{LH}}{1H} \times \frac{FKC}{1KC}$$

   K—a constant listed in every chart
   LH—inductance in Henries
   FKC—frequency in kilocycles at which the measurements were made.

2. Variation of inductance versus normalized Direct Current.
   The normalized DC is given by

   $$I_n = I_{dc} \sqrt{LH}$$

   where Idc is the dc current in MA and LH the inductance in Henries.

3. Variation of Inductance versus normalized AC voltage.
   The normalized AC voltage is given by

   $$V_n = \frac{V}{\sqrt{LH}} \times \frac{60\ cps}{F_{cps}}$$

   Vn—normalized AC voltage
   V—voltage across the coil
   LH—inductance in Henries
   F—frequency of measurement in cps

STANDARD MILITARY TRANSFORMERS

This group comprises audio and power units designed to meet MIL-T-27 A specifications.

The functional characteristics of these transformers were established by the Armed Service Standardization Program. These units are supplied in standard MIL cases.

Transformers meeting MIL-T-27A specifications Grade 1 through 6 with temperature characteristics of Class S, T, or U can be supplied on special order.

Encapsulated units using either Epoxy-Resins or Fosterite can be supplied for Grade 2 and 5.

Class U components can be supplied molded in special high temperature Freed resin.

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A (graded 1 or 4 and 2 or 5 respectively). Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores.

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending upon the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SN	Non-stabilized cores, maximum inductance variations ± 2% from −55°C to + 85°C
SE	Temperature-stabilized cores, maximum inductance variations + .1% to −.4% from −1.5°C to +54°C
SB	Temperature-stabilized cores, maximum inductance variations ± .1% from +13°C to +35°C
SD	Temperature-stabilized cores, maximum inductance variations ± .1% from −1.5°C to +54°C
SW	Temperature-stabilized cores, maximum inductance variations ± .25% from −54°C to +85°C
SP	Temperature stable carbonyl iron cores, maximum inductance variations ± .3% from −55°C to +85°C

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Therefore some coils may have a lower temperature coefficient than the one corresponding to the core stability characteristic. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

2. Self Resonant Frequency F_o:

This frequency is defined as the resonant frequency of L — Inductance and C_d — distributed capacity of the winding. Self resonant frequency may have a variation of ±10% from unit to unit.

3. Adjustment Accuracy ± 1% or 1 Turn Whichever Is Greater:

All toroidal inductors are adjusted at a frequency well below the self resonant frequency "F_o." Since all toroids have a voltage coefficient of inductance they are adjusted with a low A.C. voltage in the region of the initial permeability of the core material.

The apparent inductance at any frequency F is given by the expression

$$L\text{ app} = \frac{L}{1 - \left(\frac{f}{f_0}\right)^2}$$

Where L is the nominal inductance. For frequencies "F" well below the self resonant frequency "F_o" the fractional increase of inductance due to the self resonant frequency is

$$\frac{\triangle L}{L} = \left(\frac{f}{f_0}\right)^2 = w^2 L C_d$$

4. "Q":

The "Q" or quality factor of the coil is shown for every toroid type. Since the "Q" depends both upon the frequency and the A.C. voltage across the coil, the "Q" vs. frequency graphs show the "Q" variations for a given voltage applied across the coil. This voltage is defined by the expression,

$$V = K_q \sqrt{L_H} \times \frac{F_{KC}}{1\,KC}$$

5. Variations of Inductance vs Normalized A.C. Voltage:

All toroidal inductors have an A.C. voltage coefficient. The variations of inductance vs applied A.C voltage can be computed from the expression of normalized voltage.

$$V_{norm.} = \frac{V}{\sqrt{L_H}} \times \frac{60\ \text{cps.}}{F\ \text{cps.}} \times K_V$$

V — A.C. voltage across the coil
L_h — Inductance in henries.
F — Measurement frequency in cycles.
K_v — is the voltage coefficient (a variable parameter for different coils) listed in the graph. For high frequency toroids the expression for normalized voltage is changed to,

$$V_{norm.} = \frac{V}{\sqrt{L_H}} \times \frac{1 K_C}{F_{KC}} \times K_V$$

6. Variations of Inductance vs Normalized D.C. Current:

The incremental permeability of the coil and consequently the inductance depends upon the magnetizing D.C ampere turns The variations of inductance vs D.C. current can be computed from the expression for the normalized D.C current

$$I_{norm.} = I_{dc} \sqrt{L_H} \times K_i$$

Where I_{dc} — current in M.A. thru the coil
L_h — inductance in henries.
K_i — current coefficient (a variable parameter for different coils) listed in the graph.

7. Maximum Current:

This is the maximum non-destructive current that a coil can tolerate without overheating and consequent failure It is defined as

$$I_{mas} = \sqrt{I^2_{RMS} + I^2_{dc}}$$

The maximum current is listed for each type of toroidal inductors and is computed by dividing the parameter of the numerator by the square root of the inductance in millihenries. This current will affect the inductance value and may partially or completely saturate the inductor. The inductances variations due to I_{dc} and V_{ac} must be computed from the expressions of paragraphs 5 and 6.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied upon request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED MAGNETIC AMPLIFIERS & SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing, and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of −55°C to +75°C.

Vacuum tube and transistor preamplifiers can be supplied if very high impedance inputs are required.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

FREED TRANSISTOR CONVERTERS

THE MAC LINE OF HERMETICALLY SEALED DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters.

DC to DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to DC and DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC or DC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

FREED FILTERS

Freed Standard Filters are **Hermetically Sealed Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40 db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance — 10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage).

Special filters in all six types are available for any frequency from 200 to 20,000 cycles.

These components are designed to meet the demand for low-cost replacement parts for commercial electronic equipment.

The best commercially available materials have been utilized in the design of these units, to insure reliability and excellent performance characteristics Vacuum impregnation with a non-hygroscopic varnish to prevent penetration of humidity are employed to give these units long life and trouble-free performance.

230-115 V, 50-60 C. P. S. Stepdown Transformers rated from 25 V A up to 5,000 V A Rating and line booster transformers are included in this series.

All units, with only a few exceptions, are uncased or of shell-type construction.

Isolation transformers and Stepdown transformers are equipped with line cord and receptacle.

MILITARY STANDARD TRANSFORMERS

The U. S. Army Signal Corps, U. S. Bureau of Ships, and the U. S. Air Force, working jointly through the Armed Services Electronic Standards Agency, and in cooperation with leading producers of military transformers, have established certain military standard transformers.

These transformers bear government classification and part numbers, as shown below. Dimensions, mounting centers, terminal arrangements, and markings are all in accordance with government specifications.

All these units will meet the requirements of Grade 1 and Grade 4 MIL-T-27A specifications for Class R operation. The components listed in this series have application in military communication and control equipment, whether air-borne, ship-borne, mobile or ground installed.

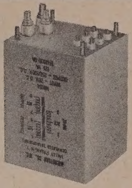
D. C. TO D. C. CONVERTER TRANSFORMERS

Permits conversion of low voltage direct current to high voltage for operating mobile and military electronic equipment. These miniaturized high efficiency transformers used in transistor switching circuits provide greatly improved reliability, efficiency, ruggedness, over vibrator and rotary power converters.



All transformers shown are hermetically sealed and constructed in accordance with MIL-T-27A Grade 4, Class R, 10,000 hour minimum life. Unique construction eliminates the difficulties usually experienced with high voltage random wound torroidal transformers and mechanical fragility of ferrite cores. On special order obtainable with modified electrical or mechanical specifications. Available from franchised stocking distributors.

As a Hybrid Transformer	This precise matching transf. is an excellent hybrid unit for operation from two 250/300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation between sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps.	500 or 600	250 or 300	250 or 300	500-125 or 600-150	+23 dbm

DESCRIPTIVE DATA, GENERAL Maximum rated operating level ▼ applies to frequency range 20-20,000 cps. Power rating is ½ at 15 cps, ¼ at 10 cps. Full power (60 cps) primary open circuit inductance is approximately 100 Henrys for each 1000 ohms of primary impedance. Leakage inductance, secondary referred to total primary, is approximately 1 mh per 1000 ohms of primary impedance. Leakage inductance, half primary to half primary is approximately 1 mh per 1000 ohms of primary impedance. Can be used between half and double of rated impedances. For halved impedances, power ratings are doubled. For doubled impedances, power ratings are halved. Secondary may be operated with either end, or C.T. grounded.

MODULATION TRANSFORMERS — THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parrallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS — THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

INSTRUMENT POWER

Instrument POWER SUPPLY Transformers

Intelligent design and construction of measuring instruments involves consideration of many factors normally neglected in electronic circuits. Regulation of power supply voltages, limitation of external magnetic fields by minimum flux density, multiple static shields to limit capacitive coupling, multiple filaments where tubes must operate at different potentials, all become necessary to obtain peak performance. The transformers on this page are a series of special designs which have been developed for instrument design.

Triad "J" series transformers closely approach the electrical performance of the "HS" series while eliminating or modifying mechanical features which increase the cost. Careful design, taking advantage of the flexibility of the "J" series units, will result in low level amplifiers which will in every way meet broadcast quality specifications.

Combined PLATE and FILAMENT Transformers

New "100" Series

Primary 115 volts 60 cycles

Triad power components are liberally designed to best meet average design specifications and to ensure maximum utility for each design. All units are beautifully finished in baked grey enamel and have all connection data permanently marked on the case.

All types are "Climatite" treated, both coil and core, for protection against moisture and for elimination of lamination chatter. Although they are small in size, the high quality materials used keep losses to a minimum. The temperature rise design is 55°C. Only copper foil static shields, grounded to the case and core, are used. Leads are of a type approved by UL for high temperature operation.

CHOPPER INPUT TRANSFORMERS - 30 to 500 cycle

Triad's new Chopper Input Transformers are manufactured under the same rigid high quality control standards as the Triad Input Transformers, plus the addition of an extremely close balance between the two halves of the primary winding. One half of the primary is balanced to the other half in both inductance and "Q". Cores are specially treated to eliminate noise in the microvolt range of input signals. Adjustment is at 60 cycles and, since input impedances are kept extremely high and the windings are not tuned, the chopper frequency may be 30 to 500 cycles. Magnetic and electrostatic shielding can be varied to meet customer's requirements.

Types for tube or transistor input are available. In addition to the standard types listed below, many types are currently being supplied to customer's specifications. We invite your inquiry on your special requirements.

RIQAP (REDUCED INSPECTION QUALITY ASSURANCE PLAN)

ALL TRIAD transformers are manufactured under a Signal Corps approved plan intended to assure quality in the product. The system includes approved procedures for incoming inspection of material, process controls in the plant, and final inspection. Transformers passed are approved for shipment for military use.

RIQAP applies to all Triad transformers, military or otherwise. Why not take advantage of the exhaustive quality control at Triad and eliminate or reduce the costs of your incoming inspection.

All of the transformers listed on the preceding pages are currently available from stock at the four plants of Triad and from better distributors in all the purchasing centers of the United States.

Triad transformers are continually being revised and improved to use the best available materials. For this reason, the Triad Transformer Corporation reserves the right to modify existing mechanical construction or electrical characteristics of any catalog item without notice.

TRIAD transformer numbers are so arranged as to indicate the type of transformer and type of mounting. The prefix letter indicates the type of transformer as follows: **A**—Audio **C**—Choke **D**—High voltage horizontal output transformer **E**—High "O" Toroidal coils **F**—Filament **G**—Geoformer **M**—Modulation **N**—Isolation or Stepdown autoformer **NW**—Yoke Networks **P**—Plate power transformer **PL**—Pulse transformer **R**—Power transformer, combined plate and filament **S**—Speaker coupling or output transformer **T, TZ**—Miniatures **TY**—Transistor transformer **V**—Vibrator power **WC, WLC**—Width and Linearity coils **Y**—Yokes. Hermetically sealed units bear the prefix **HS** and **HSM**; hermetically sealed "Trijets" **JZ, JO** and **AF**. **Type of mounting is indicated by the suffix letter which refers to the illustrations in the catalog.**

STANDARD INTERSTAGE and LINE FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327A Specs.

UTC makes a wide range of specialized filters covering bands ranging from .1 cycle to 400 megacycles. A group of standardized filters have been developed covering the more common mid-range frequencies, which take care of many filter requirements with stock units. All of these standard filters are in drawn hermetically sealed cases shielded to reduce hum pick-up. Special frequencies to order.

MINIATURE INTERSTAGE and LINE FILTERS MINIFILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327A Specs.

The UTC stock interstage filters on the above page have been an industry standard for over a decade. The new UTC MINIFILTERS provide almost the same characteristics in an extremely miniaturized package. Attenuation of these MINIFILTERS is only slightly less than their larger counterparts, as is operating level. Special filters can be supplied for any frequency above the minimum shown for each group, at $48.00 net. Straight pin terminals are provided for printed or standard circuits.

BPM units (BAND PASS) have 2:1 gain. Attenuation is approximately 2 db ± 3% from center frequency, and 35 db per octave as shown. Input 10,000 ohms, output to grid, tapped for 10,000 ohms to provide for transistor circuits. For tube circuits continuity is on grid side, for transistor use continuity is on input side. Special filters with center frequency of 30 KC or higher are available with 10,000 ohms output only. **BPM units are MIL type FR4RX22AF.**

HPM units (HIGH PASS) are down less than 6 db at cutoff frequency, and more than 30 db at .67 cutoff frequency, 40 db at .6 cutoff frequency. Input and output 10,000 ohms. **HMP units are MIL type FR4RX33AG.**

LPM units (LOW PASS) are down less than 6 db at cutoff frequency, and more than 30 db at 1.5 cutoff frequency, 40 db at 1.65 cutoff frequency. Input and Output 10,000 ohms. **LPM units are MIL type FR4RX11AG.**

UTC Telemetering Minifilters provide the same performance as the standard telemetering filters above, except that they are extremely miniaturized. These units are slanted toward use with transistors (input and output impedance 10,000 ohms), and are ideally suited to printed circuits. No mounting facilities are employed, since the straight pin terminals adequately support these light weight units. A complete set of 18 filters occupies approximately 9½ cubic inches, and weighs approximately 14 ounces. Corresponding discriminator units to specific circuit needs are available on production order . . . approximately same size.

HVC AND TVC HERMETIC VARIDUCTORS

Variable inductors hermetically sealed to MIL-T-27A Specs., all units MIL type TF4RX20YY.

UTC Varidutors have served as a simple solution to tuned circuit problems for over 15 years . . . for oscillators, equalizers, filters, etc.

HVC Inductors are hemetically sealed to MIL-T-27A and provide exceptionally wide inductance range with high Q in an extremely compact unit. HVC units are usable over a wide frequency range and have high stability with temperature and voltage change.

TVC Inductors are identical to the HVC units but provide taps at 30% and 50% of total turns. They are ideal for oscillator circuits, impedance matching, and phase inversion where high Q and adjustable inductance are required.

Inductance range is +200%, —70% of nominal value through adjusting screw on top of case. Range is covered in 900° rotation. Setting is positive. Effective Q over a wide frequency range and variation of inductance with applied AC voltage are illustrated for a typical HVC unit. Case dimensions are 1⅛" long, 25/32" wide, 17/32" high . . . weight 2 ounces. Chassis cutout dimensions for HVC and TVC units are illustrated, 9/64" dia. holes are to clear the 4-40 stainless mounting studs.

NEW "M" TYPE TOROIDS

Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF4RX20YY

UTC Permalloy Dust Toroids have been the standard of the industry for 20 years. The MQ series of coils provide the highest Q factor in their class (see curves below) with miniaturized dimensions. All units are hermetically sealed to MIL-T-27A Specifications . . . laboratory adjusted to 1% tolerance—0 DC. Uncased and molded toroids available on production orders.

The stability is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts. The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency, temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 db.

TQA units are similiar to MQA but centertapped for oscillator applications, etc. They employ an extremely stabilized structure for wide temperature range. Q is slightly lower than MQA.

MINIDUCTORS *Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF5RX20ZZ*

UTC Miniductors are ideal for transistor and printed circuit applications, providing high Q in miniature form. The ML-1 to 4 units are for medium low frequencies, adjusted to ± 3% at 1 V. 1 KC. The ML-5 thru 10 series are for lower frequencies, adjusted to ± 3% at 1 V. 400 cycles. The MM and MH units are for medium and high frequencies, adjusted to a tolerance of ± 2%.

Temperature stability is excellent on all Miniductors, from —55° C. to + 100° C. The ML units are in a Hipermalloy shield case . . . the MM and MH coils are symmetrical toroids . . . for high coupling attenuation and low hum pickup. The DCMA MAX. shown is for approximately 5% drop in inductance.

LOW FREQUENCY HIGH Q COILS *Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF4RX20YY*

Permalloy dust toroids are not suited to providing high Q at low frequencies. The MQL series of laminated Hipermalloy coils were specifically designed for this class of service. The unique structure employed provides exceptional Q and stability. Inductance values are laboratory adjusted to 2% tolerance at 1 volt, 60 cycles. Stability with voltage is excellent, for MQL-3 inductance variation is less than 1% from .1 V. to 1 V. 60 cycles. Temperature stability is exceptional, total inductance swing being less than 3.5% for the wide range of —55°C to +85°C. A hum reducing lamination structure plus heavy Hipermalloy shielding provide very low hum pickup . . . 240 microvolts/gauss for MQL-3 series connected. Two identical windings brought out to four terminals permit series, parallel, center tapped, or transformer type connections.

HIGH Q PRECISION INDUCTANCE DECADES

UTC DI inductance decades are invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. They set new standards of Q, stability, frequency range, and convenience. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency.

The switch employed is a new low capacity type which lab tests have proven for low contact resistance after 100,000 operations. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base.

DI inductance decades are housed in a compact, rugged, die cast case with control on a sloping panel, ideally suiting these units to laboratory use.

UTC hermetically sealed shielded isolation transformers are designed to give the ultimate in isolation for line-powered equipment. Isolation, which formerly could only be obtained from battery power, can now be realized by the use of these transformers. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD. (Even this minute capacitance can be substantially reduced by optimum circuit design suited to the individual application.) For this purpose shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF4SY40YY

VACUUM TUBE TYPE

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . magnetically shielded . . . and meet MIL-T-27A and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the **Magnetic Structure** is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase unit.

For AC signal control the circuit of Figure 1 is employed. For DC signal control Figure 2 applies. Figure 3 shows the use of a power transformer (MAT-5) which provides higher plate voltages (230 volt supply data of chart) and eliminates the input transformer (MAT-6). The typical response curve of Figure 4 applies to all units, the larger units feeding heavier loads.

UTC transistor MAT units are identical to their vacuum tube counterparts, but designed for low impedance control. Typical applications are illustrated in Figures 5 and 6. The input transformer may be chosen by impedance ratio rather than precise rated impedance. For example, the DO-T11 can be used as the input in Figure 5 (7500 ohms to 1500 ohms) and would have 2.3° phase shift . . . the H-14 used as the input (3750 ohms to 1500 ohms) would have a phase shift of .6°.

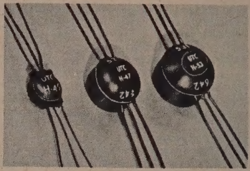
PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

Individually adjusted to parameters shown in table

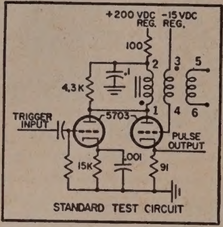
Hermetically sealed to MIL-T-27A Specs., . . . all units MIL type TF5SX36ZZ

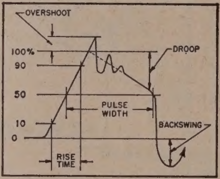
VACUUM TUBE PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from —70° C. to +130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width, as indicated on chart below. If used for coupling circuit where minimum rise time is important, use next lowest type number. Rise time will be that listed for this lower type number . . . droop will be that listed multiplied by ratio of actual pulse width to value listed for this type number. Blocking oscillator data listed is obtained in standard test circuits shown. Coupling data was obtained with H. P. 212A generator (correlated for H-55,56,57) and source/load impedance shown. 1:1:1 ratio.



For Spring Clip Mounting, use Augat No. 6016-8A for H-47 thru 52 . . . No. 6014-20A for H-53 thru 57.





DEFINITIONS

Amplitude: Intersection of leading pulse edge with smooth curve approximating top of pulse.

Pulse width: Microseconds between 50% amplitude points on leading and trailing pulse edges.

Rise Time: Microseconds required to increase from 10% to 90% amplitude.

Overshoot: Percentage by which first excursion of pulse exceeds 100% amplitude.

Droop: Percentage reduction from 100% amplitude a specified time after 100% amplitude point.

Backswing: Negative swing after trailing edge as percentage of 100% amplitude.

HERMETIC AUDIO COMPONENTS / *Hermetically sealed to MIL-T-27A Specs.*
TRANSISTOR and TUBE TYPES

The stock audio units listed below provide the high reliability which has made UTC the principal supplier of military transformers for almost 30 years.

The frequency response ratings are based on military requirements. Units that do not carry DC are appreciably better in response than the range shown. Most are within 2 db from 30 to 20,000 cycles.

The level ratings are for low distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible. For example, the H-3 will handle +21 dbm at 400 cycles. Transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Units may be used reversed, input to secondary.

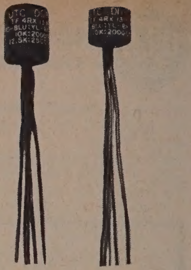
NEW* UTC Revolutionary† DO-T and DI-T TRANSISTOR TRANSFORMERS

FROM STOCK—Hermetically Sealed to MIL-T-27A Specs.



TRANSFORMERS PICTURED ACTUAL SIZE
DO-T: 5/16 Dia. x 13/32", 1/10 Oz.; DI-T: 5/16 Dia. x 1/4", 1/20 Oz.

Conventional miniaturized transistor transformers have inherently poor electrical characteristics, perform with insufficient reliability and are woefully inadequate for many applications. The radical design of the new UTC DO-T and DI-T transistor transformers provide unprecedented power handling capacity and reliability, coupled with extremely small size.

To fully appreciate DO-T and DI-T transistor transformers, the curves shown indicate their performance compared to that of similar size units now on the market. Special units available to your specs. for production applications. Available with leads at both ends on production order. Electrostatic shielding available on production orders.

Units can be used for different impedances than those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source will reduce them. Units may be used reversed, input to secondary.

The exceptional reliability of DO-T and DI-T units is basic in their unique structure. The units are rugged, full hermetic seal, **metal cased** to MIL-T-27A grade 4. The bobbin is completely rigid eliminating stress and wire movement. The turns are circular in shape rather than square, eliminating turn corner stress and effecting uniform wire lay. The coil wire and external lead are rigidly anchored terminal board fashion employing no tapes and brought out through strain relief.

OUNCER AUDIO UNITS / STANDARD AND PLUG-IN TYPES

TRANSISTOR and TUBE TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing ⅞″ diameter . . . mounting opposite terminal board. Hermetic Ouncers (RC-25 case) listed on page 1451.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

Hermetic Ouncers are listed on page 1451.

SUB-SUBOUNCER UNITS

TRANSISTOR AND TUBE TYPES

UTC Sub-subouncer units are ideal miniaturized components having high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units provide exceptional performance and reliability. Four inch color coded flexible leads are employed, securely anchored mechanically. Units are supplied without mounting facilities to provide maximum flexibility in location. However, suitable channels are available as a separate item (SSO-CH) which readily fit over the units. Units are vacuum processed and double (water proof) sealed. The curves below indicate the excellent frequency response. Hermetic-SSO units (SM case) listed on page 1451. Units can be used for impedances, other than those shown, keeping in mind that the impedance ratio is constant. Units may be used reversed, input to secondary.

LINEAR STANDARD AUDIO TRANSFORMERS

The ever increasing use of wide range equipment has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability. L-S case dimensions on page 1456.

UTC HIPERMALLOY TRANSFORMERS

The UTC Hipermalloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS
TRANSISTOR AND TUBE TYPES

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 db from 20 to 20,000 cycles, except where noted. Hermetic equivalents (RC-50 case) are listed on page 1451. All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting.

COMMERCIAL GRADE COMPONENTS

The Commercial Grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in commercial grade equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures.

All audio components are linear ±1½ db from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. Parallel feed low level interstage units with 50,000 ohms and .25 mfd.; 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load.

The UTC Varimatch transformer eliminates the power loss and high distortion caused by imprecise matching of RF load to a class B modulation through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding.

Primary impedances from 500 to 20,000 ohms.
Secondary impedances from 30,000 to 300 ohms.

COMMERCIAL GRADE COMPONENTS

UTC CG power transformers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Units are tested for breakdown at twice maximum working voltage plus 1000 volts and surge tested at 250% normal voltage. All items are vacuum impregnated and sealed with special insulating compound. The co servative design and manufacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service. SPECIAL SERIES AUDIO & POWER COMPONENTS

UTC Special Series units are specifically designed for amateur and popular-priced PA service. They are finished in a rich, commercial type medium gray enamel. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled, recommended for ICAS use.

For case dimensions see bottom of page 1463

LINE VOLTAGE ADJUSTERS WITH METER

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage.

These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly.

The nine tap switch provides for line voltage of 60 to 140 volts on 115 volts output models and 160 to 240 volts on 230 volt output model.

All units are designed for 50/60 cycle service and come complete with 6 foot input cord and plug and outlet receptacle.

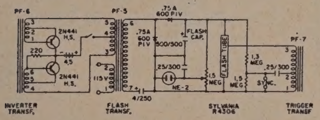
TRANSISTOR PHOTOFLASH TRANSFORMERS



PF-5

These are miniaturized light weight units for transistor type photoflash supply.

PF-6

- ●**PF-5** Primary for 115 volts 50/60 cycles or for 4½ V. battery switched by PF-6 inverter transformer. Output delivers 400 V. DC when used in voltage doubler circuit to charge photoflash capacitor (typically 40 watt-Sec.). G-1 case.
- ●**PF-6** Inverter transformer transforms 4½ V. DC from battery to input for PF-5 stepup transformer. Ouncer case (See Pg. 1453).
- ●**PF-7** Trigger transformer. Shorting .25 mfd. capacitor (changed to approx. 225 V. DC) across terminals 1-2 produces 6 KV pulse at terminal 3 for triggering flash tube. ⅞" Dia. x 1 5/16"; Wt. ½ oz.

SIGNALLING AND CONTROL TRANSFORMERS

Primary 110-120 volts, 50/60 cycles—Secondary 4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens, horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

ask Amperex
about AMPLIFRAME tubes

✱**AMPLIFRAME,** a new concept in electron tubes, designed and mass produced exclusively by Amperex, incorporates the unique **FRAME GRID** ...the closest approach to the ideal "Physicists' grid"—electrical characteristics but no physical dimensions. The **FRAME GRID** results in: • **higher transconductance per milliampere** • **tighter G_m and plate current tolerance** • **low transit time** • **low capacitances** • **lower microphonics** • **rugged construction**

AUTOMATIC REGULATION

What It Is!

The *AMPERITE Ballast-Regulating Tube* is an automatic "rheostat" designed to keep the current in a circuit at a definite value, for example, 0.5 amps.

Should the supply voltage increase, this Ballast-Regulating Tube will automatically increase in resistance to take up the increase in supply voltage.

Being a constant current device, the AMPERITE Ballast-Regulating Tube can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AMPERITE NEON LAMP TYPE NE70V . List $3.00

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 15G min.) (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per **AMPERITE** 60w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended	**2000 Hours**
If operated continuously at maximum voltage	**1000 Hours**
If operated continuously at 80% maximum voltage	**5000 Hours**
If filament is operated below glow point	**5000 Hours up**

In operation, the *Amperite* filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning *Amperite* on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an *Amperite Ballast Tube* depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 10% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25
THRESHOLD VOLTAGE	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

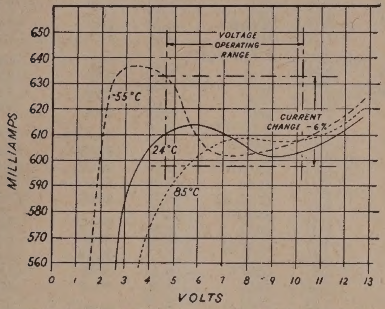
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

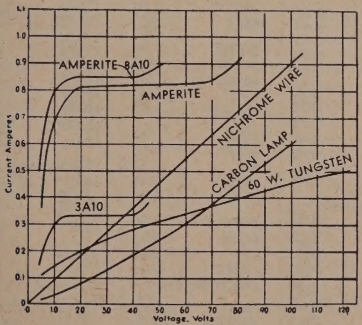
AMBIENT EFFECTS

Ambient temperature variation of —50° to +70° C will change the current value of an *Amperite* approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the *Amperite* is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.



Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of —55°, 24°, and 85°C. The percentage change with ambient is approximately the same with all type *Amperite* ballasts.



This diagram illustrates far superior regulating characteristics of the *Amperite* Ballast-Regulating Tube.

STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of *Amperites* of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to ± 1%. Advise voltage variation and currents desired.

A light, compact, and inexpensive method of obtaining close regulation is to use an *Amperite Ballast Tube* with an *Amperite* Neon Lamp—type NE70V. Base octal-base wiring-prongs 2-5. One NE70V is used for all loads up to 100W.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

Power Supply	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on **AMPERITE**	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain ± 2% current regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE**. Up to a point, the higher the percent of the supply voltage taken up by the **AMPERITE**, the better the regulation.

Radio tube filament loads—have low cold resistance which causes a high initial surge. For such loads we recommend a bleeder of 20 to 50% prox. of load and the corresponding **Amperite**. e.g.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9-4	0.9a

On Radio tube filament loads the bleeder will also improve the regulation.

105°C EXTRUDED PLASTIC TUBING (PVC)

■ **ALPHLEX PVC-105** Plastic Tubing is designed and manufactured specifically for electronic, aircraft and electrical applications involving temperatures as high as 105°C. It conforms to Specifications **MIL-I-631C, ASTM-D876, ASTM-D922** and is approved by **Underwriters' Laboratories.**

■ PVC-105's exceptional integration of desirable qualities endows it with excellent versatility and durability. Its dielectric strength is high and remains unaffected by increasing temperature throughout its range. It displays high resistance to the agents of heat, oil, chemicals, corrosion, fungi and even abrasion with no loss in tensile strength, non-flammability—or flexibility.

■ Under all the above adverse conditions, PVC-105 will retain its ability to hug and protect irregular-shaped objects, will "snake" beautifully, and will always be easy to handle.

■ To achieve this combination of advantages, special care is taken in the making of PVC-105. It is compounded with only first-grade quality non-migratory resinous type plasticizers. From laboratory to production line, from raw material to finished product, strict quality control prevails. Behind it are the same engineering and production know-how that have made the name Alpha famous in the electronic industry for over thirty-five years.

ALPHA WIRE CORPORATION

ALPHLEX® ZIPPER TUBING*

ALL-PURPOSE
To group, mark, protect — whatever your harnessing or cabling objective, Alphlex Zipper Tubing helps you do it faster, easier, at lower cost.

CONSTANT FLEXIBILITY
When conventionally laced and tied, wire often becomes "stiff" and hard to maneuver. However, when enclosed in one continuous tube of Alphlex Zipper Tubing, wires are always free to flex, easy to handle.

CUTS TIME AND LABOR
You need only a few seconds to use Alphlex Tubing — completely eliminates the necessity for dilating conventional tubing and sleeving — no pulling, no tugging, no straining of wires.

ACCESSIBILITY
The ease with which Alphlex Zipper Tubing may be unzipped and folded back to expose wires for special marking, soldering to terminations, etc., then re-folded and re-zipped, makes for faster, more efficient work at all locations along the cable.

CABLE MARKERS
The modern way to identify cables. Any type of Alphlex Zipper Tubing, any color, any length makes an effective cable marker. Alpha has the facilities to cut the Zipper Tubing to a desired length and permanently mark each piece to customer's specifications with any appropriate instruction or coding (letters and/or numbers). No tools needed. These lengths may be snapped around cables, hoses, pipes without the aid of a metal slider. Simply wrap the marker around the cable and close by manually interlocking the zipper tracks. If a permanent marker is desired, apply Alphlex PB-200, Compound Liquid Sealer before closing.

HARNESSING
Various sizes of Alphlex Zipper Tubing may be used to cover the main trunk and branches of a harness to obtain a neat, waterproof, and protective jacket.

CUSTOM CABLING
With Alphlex Zipper Tubing, there is no need for minimum orders, no costly set-up charges, because expensive extruding of a jacket is unnecessary. Just bunch, twist, or interweave the wires as desired, cover with Alphlex Zipper Tubing—that's it, a custom cable, any required length.

The first major break-through to modern harnessing and cabling

For bench work, we recommend the Alphlex Hand Tool. After laying the wires on the flat Zipper Tubing, insert the zipper tracks in the openings, where indicated, and pull the tool along the length of the cable. This Hand Tool will form the tube, close the tracks and permanently seal the jacket.

HIGH VERSATILITY
Any number of variations and adaptations are possible with Alphlex Zipper Tubing—lining its walls with various materials, covering one zipper tubing with another, perforating for ventilation, imprinting and cutting into short lengths for cable markers, eyeletting for hanging as flexible wire duct, color coding, etc.

REPLACEABLE OUTER JACKET
Alplex Zipper Tubing can be used very effectively as a secondary protective jacket on expensive cable for added insurance against abrasion, deteriorating chemicals and fumes, etc. The jacket may be replaced as needed, quickly, easily and at low cost.

EASY WIRE CHANGES
In the prototype or developmental stages, changes in coding or wiring, etc., may become necessary. This would render a conventional custom cable (with its extruded jacket) useless. With an Alphlex Zipper Tubing custom cable, you simply unzip, make the change, re-zip.

*Patents #RE24,613 and #2,558,367, and other patents

How to use Alphlex Zipper Tubing

1. Bend the zipper tubing into a circle with the zipper tracks on the left side facing up, and the tracks on the right side facing down.
2. Hold slider so that the largest end faces you and metal pull-tab is on top.
3. Place left side of zipper into lower opening of slider and right side into upper opening of slider.
4. Hold your thumb against the two sides just below the slider. Pull toward yourself, thus forcing the zipper tracks to interlock. The flap should lie on top of the wires, so as to prevent fouling of the zippers.
5. Alphlex Zipper Tubing can also be closed by forcing the tracks to interlock by pressing them together with your fingers.

How to permanently seal Alphlex Zipper Tubing

1. Apply Alphlex PB-200, Special Compound Liquid Sealer, to the zipper tracks by using the supplied brush.
2. The method recommended is to apply the PB-200 sealer a few inches at a time directly ahead of the slider. CAUTION—do not allow the sealer to dry before closing. The sealer dries quickly on the surface but requires at least 30 minutes to an hour for complete bonding.
3. When sealed, a Zipper Tubing jacket has the same properties as an extruded jacket, in that it is moisture-proof and water-proof. Should the wires inside the Zipper Tubing need repairing or modification, the jacket would have to be stripped as you would any conventional extruded type, and replaced with an additional Zipper Tubing jacket.

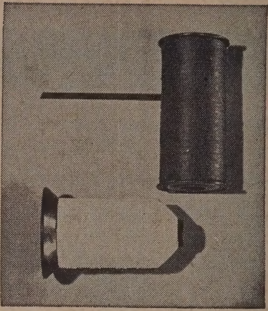
AB-295 Metal Sliders. 1 supplied free with every 25 feet. Additional sliders may be ordered separately.

ORDERING INFORMATION

When Alphlex Zipper Tubing will be closed with a metal slider, specify a Zipper Tubing I.D. 1/4″ larger than the O.D. of the cable to be covered.
A tighter fitting jacket will result when using an I.D. of Zipper Tubing, the same size as, or to the nearest larger size of the O.D. of the cable to be covered. However, in this case, the Zipper Tubing must be closed by manually engaging the tracks.

ELECTRONIC LACING CORDS AND TAPES



Types of Lacing Cord

flat braided tape This construction was developed to prevent the "cold flow" that often is encountered in wire having plastic or rubber insulations. It has been specifically designed to create a wider contact area with the insulation, so that it does not flow away from the contact point. It is considerably more flexible and easier on the user's hands and is recommended for all types of harness work. Flat tapes do not appreciatively increase the diameter of the cable.

round twisted cord Available in various strands and thicknesses to produce different tensile strengths. This type, while it may be used for plastic and rubber insulated wire, is particularly suited for wires having a secondary insulation or those utilizing a textile as an insulating material. Round cords are available with diameters from .017″ for miniature and subminiature work to .050″.

Materials

nylon Synthetic fiber resistant to: fungus, flame, acids, abrasion. Excellent tensile strength, light weight, small size.

dacron A synthetic fiber which retains all the above characteristics of Nylon plus: less elongation, better resistance to acids, no appreciable discoloration.

fiberglass Fiberglass is particularly suited for high temperature applications up to 500°F. Alpha Fiberglass lacing tape has a Teflon finish to increase the tensile strength of the fiberglass and provide an abrasion resistant surface.

NEW MINIATURE MICROPHONE CABLES 8413 and 8420

Improved materials and methods of manufacture have enabled us to manufacture two premium quality Miniature Mike Cables — one in rubber and the other in plastic. Both have low capacitance, high flexibility and long flex life.

The small diameters of these cables are made possible without sacrifice of flex life, flexibility and tensile strength through the use of fine Cadmium Bronze stranded conductors.

8413 is recommended where extreme flexibility is required and 8420 is recommended for low capacitance applications. Both cables join the Belden family of audio cables that engineers rate as "Quiet Cables."

CHOICE OF STRAIN GAUGE CABLES

To meet the requirements of the many types of Strain Gauges used under a variety of conditions, Belden offers several Strain Gauge Cables.

FOR GENERAL USE 8434 has a small diameter and light weight. The conductor contains Copperweld strands for improved tensile strength. The polyethylene insulation gives consistently low capacitance. Through the use of BELDFOIL aluminum Mylar shields, the two pairs are shielded from each other and from the outside to insure a stable signal.

FOR DC APPLICATIONS either 8424 or 8404 are recommended because of their larger conductor size. The rubber of 8424 makes it excellent for applications requiring limpness, abrasion resistance, and impact resistance. 8404, the vinyl type, has the best oil and ozone resistance and is lighter in weight.

FOR AC APPLICATIONS 8434 or 8404 is recommended for their lower capacitance, which will not vary with temperature change.

If several transducers are operating from a single cable, many customers have found that the multiple pair individually shielded cables, found on Page 9, help in reducing the bulk of cables required. Where unusual requirements exist, Belden would like to make individual recommendations.

RUBBER — PLASTIC — NEOPRENE

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.

RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.

NEOPRENE CABLES RECOMMENDED FOR: Outside use. Resistant to effects of sun, oil, and ozone.

75 OHM VIDEO CABLE

TYPICAL APPLICATIONS: Video signal transmission in color and monochrome TV studios. Provides high quality carrier of video signal with superior picture definition and eliminates problems of periodicity. Cable is manufactured with rigid control of concentricity and all dimensional tolerances. Center conductor is maintained at same distance from shield through entire length of cable. The black polyethylene jacket is manufactured with a non-contaminating, non-migratory compound. 100% SWEEP TESTED.

The folded BELDFOIL Shield gives high cable reliability together with easy termination by means of the drain wire. A most important feature of these cables is that they occupy only one third to one half the space required for a Standard Broadcast Audio Cable.

SHIELD SELECTION

Because the uses for shielded cables has grown rapidly in recent years, Belden has developed several types of shields to meet application requirements. The following information is provided to help you select the best shield for your particular requirements.

TINNED COPPER BRAID SHIELD: An excellent general purpose shield for audio and radio frequencies. It is recommended for microphone cables where there is considerable flexing, bending, and twisting. For proper termination, pigtail the shield and solder.

TINNED COPPER SPIRAL SHIELD: Particularly recommended for stationary service at audio frequencies. The shield is *not* recommended for use where there is intensive twisting or bending. Shield coverage is 95 per cent and termination is accomplished by unwrapping the shield, twisting the strands and soldering.

CONDUCTIVE COTTON PLUS DRAIN WIRE: The most flexible of all the shields. Excellent for audio frequencies. The 100 per cent shield coverage affords complete protection against 60 cycle interference. For termination, clip off the cotton and solder drain wire.

BELDFOIL ALUMINUM — MYLAR: The newest shield development. It is lighter in weight than other shields and has 100 per cent shield coverage which is excellent for stationary or limited flexing service at both audio and radio frequencies. See page 9 for complete BELDFOIL shield story.

MULTIPLE PAIR UNSHIELDED INTERCOM CABLE

TYPICAL APPLICATIONS: Balanced line intercom systems.

Made with 80C vinyl plastic compounds for high dielectric strength and the best physical properties, such as free stripping, small diameter, and tear resistance. It also resists the effects of water, sun, oil, grease, and ozone.

The conductors are paired with a short-lay twist for conductor balance, providing a quiet circuit, free from crosstalk.

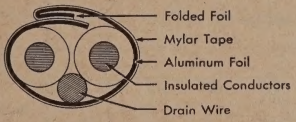
BELDFOIL ALUMINUM MYLAR SHIELDED CABLES

BELDFOIL is a Belden development and a major breakthrough in the search for quiet cables. By laminating aluminum foil with Mylar, a shield with maximum effectiveness is combined with a high dielectric strength insulation.

1. For multi-paired cables with each pair separately shielded, the Mylar is applied *outside* with an *inward* folded edge† to obtain isolation between the shields on adjacent pairs. Diagram No. 1 below shows how each pair is shielded.

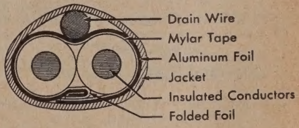
(Diagram No. 1)



Belden numbers 8767 (3 pair), 8768 (6 pair), 8764 (9 pair), 8765 (11 pair), and 8766 (15 pair) has the above type of BELDFOIL shield.

2. For certain two and three conductor BELDFOIL shielded cables, the Mylar is applied *inside* with an *outward* folded edge† which gives the table an additional 1500-volt insulation barrier. Diagram No. 2 illustrates this type of construction.

(Diagram No. 2)



Belden numbers 8434 (page 1517), 8450 and 8451 (page 1519), 8760, 8761, and 8762 (page 1520), 8770, 8771, and 8772 (page 1521), and 8763 and 8722 (page 1524) have this type of BELDFOIL shield.

BELDFOIL shields are lighter in weight, require less space, give 100% shielding, and are usually lower in cost.

CONTROL CABLES

In addition to the wide coverage of cables shown as Standards in this catalog, Belden is a principal supplier of Control Cables whether for sound systems, business systems, machinery control or automation.

Control Cables are a Belden specialty. Where shielding is required, BELDFOIL shielding is particularly adaptable for complex cables.

		WELDOHM▣ This cable is 1½ times stronger and 2½ times more flexible than the equivalent twin lead with all copper conductors, without changing the RF electrical characteristics. Tests prove its superior resistance to the pulling, whipping, and twisting that is so important to a long lasting installation.							
CELLULINE⊛  Copperweld; 2 conductors parallel, polyethylene jacket with inert gas filled unicellular polyethylene core.	8275	20 (7x28)	Brown	.300 x .400	80%	4.6	100 200 300 400 500 700 900	1.05 1.64 2.12 2.5 2.98 3.62 4.3	50, 75, 100 coils in counter dispenser 500, 1000 spools
		CELLULINE⊛ Maintains uniform electrical characteristics by eliminating all possible moisture between conductors. Installation is easier as no end-sealing is necessary. Losses are lower because of its lower dielectric constant (1.5). The thick outer wall of brown polyethylene protects the cable from abrasion and sun damage, and the round shape offers less wind resistance. The result is a longer lasting, more efficient line which helps maintain a strong UHF or VHF picture.

SWEEP TESTING

For satisfactory transmission of a signal through a cable at any frequency, Belden Sweep Tests every foot of its Community TV Cables at all channels in the VHF Frequency range on an oscilloscope.

Sweep Testing, when performed by trained technicians using the most modern equipment, prevents unsatisfactory program reception due to imperfections in the cable acting as "Filter Traps" at some frequencies.

The Black Polyethylene Jackets on Belden numbers 8211, 8212, 8213, 8232, and 8233 are manufactured with a non-contaminating, non-migratory compound specially formulated for superior weather resistance.

WIRES CABLES CORDS
NYLCLAD

Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

NEW THIN WALL BIRFLON T-500
TEFLON* SPAGHETTI TUBING

BIRNBACH

Birflon T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures. Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron — therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

ADDITIONAL ADVANTAGES OF BIRFLON T-500 TEFLON*

- **ELECTRICAL:** Low power factor, low dielectric constant, high volume and surface resistivity, good dielectric strength (500 to 1000 volts/MIL) constant over wide ranges of temperatures and frequencies. Dielectric constant of 2.0 and dissipation factor of 0.0002 are lowest of any solid dielectric.
- **THERMAL:** No change of electrical properties with temperature (25°C. to 250°C.) or frequency (60 CPS to 100 MC). Class C insulation — capable of continuous service at temperatures to 250° C. Has color stability.
- **TOUGHNESS AND FLEXIBILITY:** Has high impact strength. Is tough and flexible over the broad temperature range of —90° C. to 250°C. Service range —320°F. to 500° F.
- **CHEMICAL INERTNESS:** Completely inert to all chemicals and solvents except molten alkali metals and fluorine at elevated temperatures and pressures. Non-corrosive to all metals.
- **MOISTURE ABSORPTION:** Zero moisture absorption. Completely sun and weather resistant.
- **NON-FLAMMABLE** • **LOWEST COEFFICIENT OF FRICTION**
- **FUNGI RESISTANCE:** Inert to all fungi growths.
- **SIZES:** Birflon T-500 Teflon Tubing available in sizes to fit B & S gauge wires. Thin wall available from stock, in sizes No. 32 thru 1¼" I.D. Additional sizes and wall thicknesses made to order.

Birflon T-500 is made from high molecular weight virgin "Teflon" and meets AMS 3651B, 3653 and MIL-C-17B specifications.

Birnbach RETRACTILE KINKLESS CORD SETS

BIRNBACH COILED RETRACTILE (KINKLESS) CORD AND CORD SETS

This series of Birnbach Coiled Kinkless Retractile Cords are permanently coiled into a spring-like shape without the use of metal springs or elastic bands. They have inherent "Recovery" properties. These Retractile cords extend approximately six times its retracted length, returning to its exact original shape and length when released. Always as long as you need them and no longer, they will not kink, tangle, trail, knot or dangle on the floor or bench and cause accidents.

PERMALINE TV TRANSMISSION LINES

COLUMBIA is first to offer a television transmission line with an insulation so good that it can be GUARANTEED IN WRITING to give a service life far beyond the normal life of brown Polyethylene television lines. PERMALINE is a high molecular weight Polyethylene containing carbon black for maximum resistance to sunlight, which has been proven the chief factor in deterioration of ordinary television lines. The insulation value of 50 Mils of PERMALINE is equal to over 150 Mils of conventional brown Polyethylene.

Electrical characteristics of PERMALINE are very similar to Brown Polyethylene television lines but as there is no deterioration. Attenuation remains constant instead of increasing as is the case with brown Polyethylene, which becomes brittle and cracks. This is truly the first new development in television transmission lines in ten years.

PERMALINE VHF-UHF TV TRANSMISSION LINE

Since the introduction of this cable in May, 1956 it has been proven beyond any doubt that this cable has no equal for reliability over the entire range of VHF and UHF channels under the most adverse conditions, such as salt spray, sunlight, extremes of heat and cold, stress cracking, chemical fumes, whipping in high winds, etc. In many areas throughout the country where other cables have failed due to salt deposits on transmission lines, this cable has given satisfactory reception at all times. Foam polyethylene tubes provide excellent low loss dielectric and require no sealing. 22 gauge solid copperweld conductors mean high tensile strength so necessary where whipping of cable is a problem. Heavy duty jacket of high molecular weight BLACK PERMALINE POLYETHYLENE is a protection against all hazards. We believe this is the finest all-purpose television transmission line available today. Impedance is 270 ohms, nominal attenuation is 3.2 D/B at 500 M/C and 4.6 D/B at 900 M/C. Cable size is approximately .295 x .402.

PERMAFOAM LOW LOSS COAXIAL CABLES

PERMAFOAM is a new type of coaxial cable for television systems, communication work, and all other co-ax applications. A foam polyethylene dielectric replaces the conventional solid polyethylene thus providing far lower capacity and attenuation. In fact, attenuation is approximately 25% lower than standard coaxial cables of same type. Overall jacket is our PERMALINE high molecular weight polyethylene. This non-contaminating jacket is unaffected by salt air, chemical fumes, damp rot, fungus, acids, alkalis, etc., and is remarkably resistant to all extreme weather conditions. Moisture resistance is so high that this insulation is now used on submarine cables. Will withstand severe temperature extremes and is immune to the deteriorating effects of sunlight and other ultra violet. Note: In addition to the PERMAFOAM cables listed below, any other RG U cable is available with a foam polyethylene dielectric on special order.

FLEXFOAM ULTRA LOW CAPACITANCE MICROPHONE CABLES — EXCLUSIVE WITH COLUMBIA

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance. Color—Grey.

Color is always a problem since many sound customers want the color of the wire to match the color of the wall. CLEARFLEX wire will match any color. Note that both the insulation over the conductor as well as the outer jacket is crystal clear. One conductor is tinned—one is bare to indicate polarity.

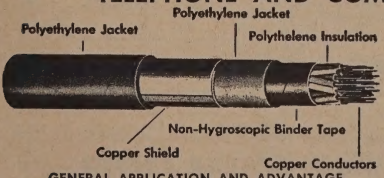
TELEPHONE AND COMMUNICATION CABLE DIRECT BURIAL TYPE

FULLY COLOR CODED



GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in **direct burial installations** provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrically varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethlene jacket.

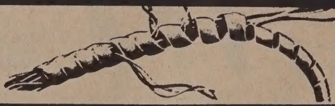
SPIRAL WRAP



Illumitronic has the most complete line of PLASTIC ROD, TUBING and SHEET.

Also HARNESSING and CABLING materials:

Spiral Wrap is spirally cut plastic tubing with many uses. It is ideal for bundling wires into compact and flexible cables. Spiral Wrap is also used to prevent abrasion, to insulate, and to hold wires, cables and tubing, etc. Spiral Wrap is available in 5 types of plastic—each with properties for specific applications. For general purpose applications Polyethylene Spiral Wrap (SWP) is recommended. It will withstand temperatures to 220°F. Nylon Spiral Wrap (SWN) is tough and has excellent abrasion characteristics along with excellent temperature characteristics to 300°F. Rulan Spiral Wrap (SWR) is intended for applications where a flame-retardant material is required. Both Irradiated Polyethylene (SWI) and Teflon Spiral Wrap (SWT) have extremely good temperature characteristics. SWT will stand temperatures to 500°F. Teflon Spiral Wrap also has chemical inertness and is non-burning

TEFLON* MINIATURE COAXIAL CABLE

DESCRIPTION: Plastoid "Teflon" miniature coaxial cables are about ¼ the outside diameter of comparable RG types, yet provide the same impedance characteristics as standard types. In three widely used impedance ranges (50, 70 and 93 ohms) these "Teflon" miniature cables exhibit stable characteristics when operated up to 200°C and can be used successfully in confined areas and where high ambient temperatures are present. These miniature coaxial cables may be applied with any desired outer coating, and will withstand temperatures up to 250°C, when supplied with an impregnated fiber glass jacket.

CONSTRUCTION: Both conductor and braid usually employ silver plated wire. Standard jacket material is "Teflon". Any desired jacketing such as Nylon, Fiberglass, Teflon Coated Fiberglass, KEL-F or other suitable jackets are available to meet unique conditions and specifications.

APPLICATIONS: Plastoid "Teflon" miniature coaxial cables are the ultimate in space conservation as compared to standard RG types. Because of their rugged construction, they are an important contribution to such varied applications as aircraft and guided missiles, plants or laboratories where instrument hook-ups are subjected to chemical corrosion or abrasive treatment.

DESIGN FEATURES: Plastoid "Teflon" miniature coaxial cables have many advantages, a few of which are: Miniature size with some impedance as comparable RG types; ability to withstand high temperature and corrosive or abrasive conditions; high voltage characteristics and excellent flexibility at temperatures as low as —65°C. The uniform OD of these light weight cables makes it possible to use the same size connector for each of the three impedance ranges.

"TAPPEE" STANDOFF INSULATOR

A Standoff which is especially designed for use with open line transmission wire installations. To take up slack in line, tighten screws in slots after pulling taut. For use as ordinary spacer—partially tighten set screws (see illustrations). This will permit free movement of wire in the slots, thereby doing away with potential wire breaks due to backward and forward motion caused by wind. Ideal also for use as anchor point or spacer for "Fence Wire" installations. For use in 600 Ohm installations, use outside two slots. Particularly good for community installations, where random spacing of open line is desirable to avoid tuned circuits created by regular spacing. Permits inexpensive, time saving, trouble free installations. For use with gauges from No. 12 to No. 18. Block is high impact polystyrene; hardware is double dip galvanized steel.
